Seeing Students Learn Science Modern Classroom Assessment offers an applied, student-centered guide to the major research-based approaches to assessment in today's modern classroom. Rather than simply list basic assessment formats with a few examples, as many textbooks do, award-winning professor and scholar Bruce Frey's book fully explores all five key approaches for teacher-designed assessment—Traditional Paper-and-Pencil, Performance-Based Assessment, Formative Assessment, Universal Test Design, and Authentic Assessment—while making abstract concepts and guidelines clear with hundreds of real-world illustrations and examples of what actual teachers do. Offering a variety of engaging learning tools and realistic stories from the classroom, this text will give any reader a strong foundation for designing modern assessments in their own classrooms.

Spectrum Test Prep, Grade 5 Science educators in the United States are adapting to a new vision of how students learn science. Children are natural explorers and their observations and intuitions about the world around them are the foundation for science learning. Unfortunately, the way science has been taught in the United States has not always taken advantage of those attributes. Some students who successfully complete their K science classes have not really had the chance to "do" science for themselves in ways that harness their natural curiosity and understanding of the world around them. The introduction of the Next Generation Science Standards led many states, schools, and districts to change curricula, instruction, and professional development to align with the standards. Therefore existing assessments whatever their purpose cannot be used to measure the full range of activities and interactions happening in science classrooms that have adapted to these ideas because they were not designed to do so. Seeing Students Learn Science is meant to help educators improve their understanding of how students learn science and guide the adaptation of their instruction and approach to assessment. It includes examples of innovative assessment formats, ways to embed assessments in engaging classroom activities, and ideas for interpreting and using novel kinds of assessment information. It provides ideas and questions educators can use to reflect on what they can adapt right away and what they can work toward more gradually.

The perspectives and empirical research examined in this conceptual analysis illustrate the various ways in which the Stanford Center for Assessment, Learning, and Equity (SCALE) Teacher Performance Assessment (edTPA) promises to restructure teacher education in the United States. The authors consider both the affordances and the constraints that teacher performance assessments offer for teacher preparation programs, and conclude by discussing the implications of the intersections among policy, privatization, professionalization, and performance assessments of teachers, as well as the relationship between performance assessments and teacher education. The impact of the edTPA on the development of signature pedagogies in teacher education is also discussed.

The study employed a quantitative method design. A quasi-experimental method was used to select the experiment and control groups. The sample was N=42. The experiment group (N=20) was exposed to traditional teaching and the WebQuest while the control group (N=22) was exposed to the traditional lecture method. Both descriptive and inferential statistics were used to analyze the data. The results revealed that the integration of a WebQuest enhanced student performance for the posttest.
