The fourth conference in the series of international meetings on Integrated F- mal Methods, IFM, was held in Canterbury, UK, 4–7 April 2004. The conference was organized by the Computing Laboratory at the University of Kent, whose main campus is just outside the ancient town of Canterbury, part of the county of Kent. Kent is situated in the southeast of England, and the university sits on a hill overlooking the city of Canterbury and its world-renowned cathedral. The UniversityofKentwasgran teditsRoyalCharterin1965.Todaytherearealmost 10,000 full-time and part-time students, with over 110 nationalities represented. The IFM meetings have proven to be particularly successful. The ?rst m- ting was held in York in 1999, and subsequently we held events in Germany in 2000, and then Finland in 2002. The conferences are held every 18 months or so, and attract a wide range of participants from Europe, the Americas, Asia and Australia. The conference is now ?rmly part of the formal methods conference calendar. The conference has also evolved in terms of themes and subjects - presented, and this year, in line with the subject as a whole, we saw more work on veri?cation as some of the challenges in this subject are being met. The work reported at IFM conferences can be seen as part of the attempt to manage complexity by combining paradigms of speci?cation and design, so that the most appropriate design tools are used at di?erent points in the life-cycle.

Reformulating Industrial Relations in Liberal Market Economies

The Health of a City

Spanning most of the years of the one-party South, the public career of Virginian Claude A. Swanson, congressman, governor, senator, and secretary of the navy, extended from the second administration of Grover Cleveland into that of Franklin Roosevelt. His record, writes Henry C. Ferrell, Jr., in this definitive biography, is that of "a skillful legislative diplomat and an exceedingly wise executive encompassed in the personality of a professional politician." As a congressman, Swanson abandoned Cleveland's laissez faire doctrines to become the leading Virginia spokesman for William Jennings Bryan and the Democratic platform of 1896. His achievements as a reform governor are equaled by few Virginia chief executives. In the Senate, Swanson worked to advance the programs of Woodrow Wilson. In the 1920s, he contributed to formulation of Democratic alternatives to Republican policies. In Roosevelt's New Deal cabinet, he helped the Navy obtain favorable treatment during a decade of isolation. The warp and woof of local politics are well explicated by Ferrell to furnish insight into personalities and events that first produced, then sustained, Swan-son's electoral success. He examines Virginia educational, moral, and social

reforms; disfranchisement movements; racial and class politics; and the impact of the woman's vote. And he records the growth of the Hampton Roads military-industrial complex, which Swanson brought about. In Virginia, Swanson became a dominant political figure, and Ferrell's study challenges previous interpretations of Virginia politics between 1892 and 1932 that pictured a powerful, reactionary Democratic "Organization," directed by Thomas Staples Martin and his successor Harry Flood Byrd, Sr., defeating would-be progressive reformers. A forgotten Virginia emerges here, one that reveals the pervasive role of agrarians in shaping the Old Dominion's politics and priorities.

The Harbinger II

Over the past twenty years, many low- and middle-income countries have experimented with health insurance options. While their plans have varied widely in scale and ambition, their goals are the same: to make health services more affordable through the use of public subsidies while also moving care providers partially or fully into competitive markets. Colombia embarked in 1993 on a fifteen-year effort to cover its entire population with insurance, in combination with greater freedom to choose among providers. A decade later Mexico followed suit with a program tailored to its federal system. Several African nations have introduced new programs in the past decade, and many are testing options for reform. For the past twenty years, Eastern Europe has been shifting from government-run care to insurance-based competitive systems, and both China and India have experimental programs to expand coverage. These nations are betting that insurance-based health care financing can increase the accessibility of services, increase providers' productivity, and change the population's health care use patterns, mirroring the development of health systems in most OECD countries. Until now, however, we have known little about the actual effects of these dramatic policy changes. Understanding the impact of health insurance–based care is key to the public policy debate of whether to extend insurance to low-income populations—and if so, how to do it—or to serve them through other means. Using recent household data, this book presents evidence of the impact of insurance programs in China, Colombia, Costa Rica, Ghana, Indonesia, Namibia, and Peru. The

contributors also discuss potential design improvements that could increase impact. They provide innovative insights on improving the evaluation of health insurance reforms and on building a robust knowledge base to guide policy as other countries tackle the health insurance challenge.
