This book contains a collection of research papers on accounting information systems including their strategic role in decision processes, within and between companies. An accounting system is a complex system composed of a mix of strictly interrelated elements such as data, information, human resources, IT tool, accounting models and procedures. Accounting information systems are often considered the instrument by default for accounting automation. This book aims to sketch a clear picture of the current state of AIS research, including design, acceptance and reliance, value-added decision making, interorganizational links,

and process improvements. The contributions in this volume emphasize that AIS has grown into a powerful strategic tool. The book provides evidence for this observation by examining a wide range of current issues ranging from theory development in AIS to practical applications of accounting information systems. In particular it focuses on themes of growing interest in the realm of XBRL and Financial Reporting, Management Information Systems, IT/IS Audit and IT/IS Compliance. The book will be of interest to financial and managerial accountants and IT/IS practitioners, including information systems managers and consultants.

## [Cost Accounting for Managerial Planning, Decision Making and Control](#)

Cost Accounting for Managerial Planning, Decision Making and Control emphasizes the analysis and evaluation of cost accounting information for managerial planning, control, and decision-making. Our goal is to help students (future managers) understand how cost accounting information adds value to an organization in a highly competitive business environment. The philosophy underlying the development of this book is that providing cost

accounting information is primarily a logical process, rather than a procedural one. It is most important that students first understand the basic concepts and objectives, and then gain some experience in applying these concepts in different environments. Through this approach, students will be better equipped to deal with the unforeseen situations they will encounter in professional practice or on professional examinations. This philosophy is evident in each chapter, as basic concepts are presented and then illustrated with examples and a wide variety of homework problems. This text is intended for use in undergraduate and graduate courses in cost accounting at both the basic and advanced levels. It provides a complete and concise coverage of topics commonly included in a basic course, with an in-depth coverage of selected topics more appropriate for an advanced course in cost accounting. Modular coverage of these topics permits the instructor to adapt the text to his or her own preferences for course content. Plus, an extremely clear writing style contributes to the ease with which students will comprehend the contents of each chapter. By emphasizing the differing uses for cost accounting information, our intent is to make the student an intelligent provider, user, and interpreter of this information.

This revised and updated fifth edition of Accounting for Managers builds on the international success of the previous editions in explaining how accounting is used by non-financial managers. Emphasizing the interpretation rather than the construction of accounting information, Accounting for Managers encourages a critical, rather than an unthinking acceptance of accounting techniques. Whilst immensely valuable for planning, decision-making and control, users of accounting information need to recognize the assumptions behind, and the limitations of particular accounting techniques. As in the previous editions, the book links theory with practical examples and case studies drawn from real business situations across a wide range of manufacturing, retail and service industries.
