**Bike Book Neuroeconomics, neuromarketing, neuroaesthetics, and neurotheology** are just a few of the novel disciplines that have been inspired by a combination of ancient knowledge together with recent discoveries about how the human brain works. The mass media are full of news items featuring colour photos of the brain, that show us the precise location in which a certain thought or emotion, or even love occurs, hence leading us to believe that we can directly observe, withno mediation, the brain at work. But is this really so? This fascinating, accessible, and thought provoking new book questions our obsession with brain imaging. Written by two highly experienced psychologists, it discusses some of the familiar ideas usually associated with mind-body,

**John Haynes** From the industrial revolution to the railway age, through the era of electrification, the advent of mass production, and finally to the information age, the same pattern keeps repeating itself. An exciting, vibrant phase of innovation and financial speculation is followed by a crash, after which begins a longer, more stately period during which the technology is actually deployed properly. This collection of surveys and articles from *The Economist* examines how far technology has come and where it is heading. Part one looks at topics such as the “greying” (maturing) of IT, the growing importance of security, the rise of outsourcing, and the challenge of complexity, all of which have more to do with implementation than innovation. Part two looks at the shift from corporate computing towards consumer technology, whereby new technologies now appear first in consumer gadgets such as mobile phones. Topics covered will include the emergence of the mobile phone as the “digital Swiss Army knife”; the rise of digital cameras, which now outsell film-based ones; the growing size and importance of the games industry and its ever-closer links with other more traditional parts of the entertainment industry; and the social impact of technologies such as text messaging, Wi-Fi, and camera phones. Part three considers which technology will lead the next great phase of technological disruption and focuses on biotechnology, energy technology, and nanotechnology.

Dictionary Catalog of the Research Libraries of the New York Public Library, 1911-1971 By analysing the rationales for sustainability strategies, this book addresses a timely question for managers, academics and MBAs: 'when does it pay to be green?' Based on solid theoretical foundations and empirical research, it clarifies the elements involved in the formation and evaluation of sustainability strategies in firms.

Illinois Issues This book examines in detail both historical and current legal concepts of 'religious cultural heritage' within the context of the European continent. The latter group is primarily based on the variety of sacred cultural elements emanating from the different religious traditions of the peoples of Europe, which are deemed worthy of protection and preservation due to their outstanding value, in terms of their social, cultural and religious significance. In view of this, the study provides evidence of the European States' active involvement with their sacred/cultural treasures, on the basis of the political and legal foundations of neutrality and pluralism. Furthermore, the book analyzes all relevant international legislative instruments (i.e. the plethora of EU, EC and UNESCO norms), as well as all major European legislative patterns, in light of their significance for the aforementioned aspects of pluralism and neutrality. The interdisciplinary references listed at the end of each chapter provide an additional incentive for further reading on the subject matter. The most important finding to emerge from the study is that there is a shared legal ethos in Europe that imposes a duty of appropriate care concerning the vast variety of sacred cultural goods and the religious cultural heritage in general, as an invaluable repository of European cultural capital. It also considers the sui generis nature of this capital: like any other type of asset, it may deteriorate or fade over time, necessitating investment in its preservation or refurbishment; nevertheless, like no other, this particular capital maintains a distinct cultural value, as it contains an additional characteristic of 'sacredness' expressed in the form of its 'religious character,' the latter being analyzed as a triptych of religious memory, religious aesthetics and religious beliefs.
