The Oxford Textbook of Medicine is published online and has been regularly updated for many years, but the production of a new and very substantially updated edition provides a moment when it is natural and proper to reflect on what has changed in Medicine—and what has not—in recent years. The sixth edition of the textbook considers exactly what modern medicine has to offer patients and

In biochemistry, dialysis is the process of separating molecules in solution by the difference in their rates of diffusion through a semipermeable membrane, such as dialysis tubing.. Dialysis is a common laboratory technique that operates on the same principle as medical dialysis. In the context of life science research, the most common application of dialysis is for the removal of unwanted

Structuur. Eukaryoten zijn organismen die hun DNA opslaan in een afzonderlijk cellulair compartiment genaamd celkern of nucleus. Tot de eukaryoten behoren complexe levensvormen: de protisten, schimmels, wieren, planten en dieren, inclusief de mens. In dierlijke cellen is de celkern het grootste organel, dat met behulp van een lichtmicroscop over het algemeen duidelijk zichtbaar is.

Biochemistry or biological chemistry, is the study of chemical processes within and relating to living organisms. A sub-discipline of both chemistry and biology, biochemistry may be divided into three fields: structural biology, enzymology and metabolism. Over the last decades of the 20th century, biochemistry has become successful at explaining living processes through these three disciplines.

Anhydrous Dextrose is the anhydrous form of D-glucose, a natural monosaccharide and carbohydrate. Dextrose serves to replenish lost nutrients and electrolytes. The agent provides metabolic energy and is the primary ingredient in oral rehydration salts (ORS) and is used in intravenous (IV) fluids to provide nutrients to patients under intensive care who are unable to receive them by the oral route.
