Dr. James W. Kalat's BIOLOGICAL PSYCHOLOGY is the most widely used text in the course area, and for good reason: an extremely high level of scholarship, clear and occasionally humorous writing style, and precise examples. Throughout all eleven editions, Kalat's goal has been to make biological psychology accessible to psychology students, not just to biology majors and pre-meds. Another goal has been to convey the excitement of the search for biological explanations of behavior, and Kalat delivers. Updated with new topics, examples, and recent research findings—and supported by new online bio-labs, part of the strongest media package yet—this text speaks to today's students and instructors. Since his New York Times op-ed column debuted in 2011, Mark Bittman has emerged as one of our most impassioned and opinionated observers of the food landscape. The Times' only dedicated opinion columnist covering the food beat, Bittman routinely makes readers think twice about how the food we eat is produced, distributed, and cooked, and shines a bright light on the profound impact that diet—both good and bad—can have on our health and that of the planet. In A Bone to Pick, Mark's most memorable and thought-provoking columns are compiled into a single volume for the first time. As abundant and safe as the American food supply appears to be, the state of our health reveals the presence of staggering deficiencies in both the system that produces food and the forces that regulate it. Bittman leaves no issue unexamined: agricultural practices, government legislation, fad diets, and corporate greed all come under scrutiny and show that the issues governing what ends up in our market basket and on our tables are both complex and often deliberately confusing. Unabashedly opinionated and invariably thought-provoking, Bittman's columns have helped readers decipher arcane policy, unpack scientific studies, and deflate affronts to common sense when it comes to determining what "eating well" truly means. As urgent as the situation is, Mark contends that we can be optimistic about the future of our food and its impact on our health, as slow-food movements, better school-lunch programs, and even "healthy fast food" become part of the norm. At once inspiring, engaging, and enlightening, A Bone to Pick is an essential resource for every reader eager to understand not only the complexities inherent in the American food system, but also the many opportunities that exist to improve it.

Exceptional Learners: An Introduction to Special Education is a research-based general approach to the characteristics of exceptional learners and their education. This book emphasizes classroom practices as well as the psychological, sociological and medical aspects of disabilities and giftedness. It features Canadian research, policies, and practices, information on how to access provincial/territorial and federal websites, networks and organizations relating to exceptionalities in Canada.

Mind Design: The Adaptive Organization of Human Nature, Minds, and Behavior does what most books on the subject don't do. It deals with the "big questions" in psychology and philosophy from an evolutionary neuroscience perspective. This highly readable volume provides a provocative look at the evolutionary origins and neurophysiological underpinnings of mind—including free will, the self, biological origins of the duality of human moral nature, human mate value and mate selection, the sensory/perceptual systems as adaptive virtual reality machines, and the emotions, intelligence, and consciousness as evolved psychological adaptations.

Fully updated to reflect DSM-5 and the newest scientific, psychological, multicultural and psychiatric research, the book introduces and integrates the Multipath Model of Mental Disorders to explain how four essential factors—biological, psychological, social, and sociocultural—interact to cause mental disorders. A focus on resilience highlights prevention and recovery from the symptoms of various disorders. This edition also continues its emphasis on the multicultural, sociocultural and diversity aspects of abnormal psychology. The authors present material in a lively and engaging manner, connecting topics to real-world case studies, current events, and issues of particular importance and relevance in today's world.
