Tissue engineering and regenerative medicine is a new, interdisciplinary branch of science that combines knowledge from numerous scientific fields including biology, biochemistry, physics, chemistry, applied engineering, and medicine. It aims to restore damaged parts of the human body by rebuilding them in vitro using individual building blocks of biological tissues such as cells and the extracellular matrix that surrounds them. The authors hope to spark students' interest in this exciting new field of science as well as give them a basic knowledge of its terminology. This book is based on a hands-on practical course in tissue engineering conducted by the Fulbright US Scholar recipient, Dr. Narine Sarvazyan (George Washington University, Washington USA). It provides an overview of the core topics of the tissue engineering field, including stem cell differentiation, the role of extracellular matrix and attachment proteins, scaffolds, and culturing of engineered tissues. Each chapter is accompanied by hands-on demonstrations and self-check questions. The text is easily readable for students of all backgrounds and the described protocols can be conducted using common lab equipment. This textbook is also useful for developing undergraduate and graduate courses that teach basic methods and approaches in this promising and rapidly developing field.

Digital identity is the ground necessary to guarantee that the Internet infrastructure is strong enough to meet basic expectations such as security and privacy. Anywhere anytime mobile computing is becoming true. In this ambient intelligent world, the choice of the identity management mechanisms will have a large impact on social, cultural, business and political aspects: privacy is a human need and the all of society would suffer from the demise of privacy; people have hectic life and cannot spend their whole time administering their digital identities. The choice of identity mechanisms will change the social, cultural, business and political environment. Furthermore, the identity management is also a promising topic for modern society. In the first version of this book chapter, it seemed that identity management would be based on the paradigm of federated identity management and user-centric identity management. The first one empowers the management of identity and the second the users to actively manage their identity information and profiles. A time of writing this second edition of the chapter, although the technical building blocks detailed in this chapter remains and are improved, they are hidden under a number of major online social networks providers (Google, Facebook, LinkedIn, Twitter) where users have already created their account and use this account to automatically log into less well-known online Web sites and services. Firstly, we provide an overview of identity management from identity 1.0 to identity 2.0 and higher, with emphasis on user centric approaches. Also we survey how have evolved the requirements for user-centric identity management and their associated technologies with emphasis on the federated approaches and user-centricity. Secondly, we will focus on related standards XRI and LID issued from Yadis project, and platforms mainly ID-WSF, OpenID, InfoCard, Sxip and Higgins. Thirdly, we discuss user management through “social login” that seems to be the only approach that has won large user adoption and that was not expected at time of writing the first edition of this book chapter. At the end, we cover identity management for mobile settings and focus on the future of mobile identity management.

Advice Online presents a comprehensive study of advice-giving in one particular American Internet advice column, referred to as 'Lucy Answers'. The discursive practice investigated is part of a professional and educational health program managed by an American university. The study provides insights into the linguistic realization of both asking for and giving advice in a written form and thus adds to the literature on advice columns as a specific text genre, on advice in health care contexts, and on Internet communication. The book offers a comprehensive literature review of advice in health encounters and other contexts, and uses this knowledge as a basis for comparison. Advice Online demonstrates how qualitative and quantitative research methods can be successfully combined to arrive at a comprehensive analysis of a discursive practice. It provides essential information on advice-giving for researchers, academics and students in the fields of (Internet) communication, media studies, pragmatics, social psychology and counseling. Health educators who work for advice columns or use similar forms of communication will also benefit from the insights gained in this study.

Real Research: Research Methods Sociology Students Can Use by Liahna Gordon is an innovative text that takes a holistic approach to the subject by discussing each step in the research process within the context of a particular method. After an opening chapter that surveys different methods of data collection and the components of research, students proceed immediately to chapters on specific methods. Each of these chapters begins with a description of the method and the logic that underlies it, so that students can see how each step in the research process fits within the logic of that particular method. The chapters then go on to present all of the steps of research as they relate to that particular research method, from writing research questions through analysis. With this format, instructors can begin engaging students in hands-on exercises almost immediately, increasing interest in and comprehension of the material.

Inhaltsangabe:Abstract: Based on the Expectancy Disconfirmation Model as the underlying construct, methods to measure customer satisfaction with products and the steps to be undertaken in the research process are investigated. The measurement of Derived Satisfaction using (dis)confirmation was found to be the appropriate approach to 'CS' measurement. The Critical Incidents Technique can be used to assess the influence of exceptional experiences and the customers' evaluation of value-added services. The method of Focus Group interviewing is most appropriate for the exploration of important product attributes with customers while In-Depth Interviews structure salespeople- and executive interviews. It was also shown that during the research process, several points specific to 'CS' measurements need to be accounted for. The Internet services currently used by marketing and social researchers include E-mail, mailinglists, newsgroups, Internet Chat, the World Wide Web (WWW) and Virtual Worlds. Virtual Worlds, being most advantageous for observational studies, are not useful for customer satisfaction research. Virtual Communities, in turn, have some promising characteristics for future use. Internet research methods based on these services include E-mail surveys, WWW-surveys

and online Focus Groups. Common advantages of E-mail- and WWW-surveys include administrative and response speed, cost savings and global reach of respondents. Their greatest common disadvantage is the non-representativeness of the respondents for the larger population as well as their self-selection. Unless access is restricted to a known population, probability sampling is impossible when using the World Wide Web. Because of its serious disadvantages, the use of online Focus Groups is not (yet) advisable. Based on these insights, the Internet was found to be an advantageous medium for customer satisfaction studies only if specific conditions are met. Companies need to investigate on a case-by-case basis if the online measurement of customer satisfaction is possible in their specific situation. The recommendations that were made are summarized in the online research process and the decision-making framework. The results of a survey among market research agencies show that practitioners are to a large extent aware of the limitations within which the Internet can be used for customer satisfaction surveys. However, especially WWW-surveys sometimes are conducted in a way that does []

Based on the author's TeleSmart 10 System for Power Selling, this award-winning business book pinpoints the ten skills essential to high-efficiency, high-success sales performance in an age of telesales and digital selling. Smart Selling on the Phone and Online equips salespeople with the powerful tools they need to open stronger, build trust faster, handle objections better, and close more sales when dealing with customers they can't see face-to-face. You'll learn how to: overcome ten different forms of "paralysis" and reestablish momentum; sell in sound bites, not long-winded speeches; ask the right questions to reveal customer needs; navigate around obstacles to get to the power buyer; and prioritize and manage your time so that more of it is spent actually selling. The world of selling keeps changing, and sales professionals are on the front line of innovation to keep profits flowing. Combining an accessible text with clear graphics and step-by-step processes, Smart Selling on the Phone and Online will help any rep master the world of sales 2.0 and become a true sales warrior.

Internet advertising has come off age; yet little is known in research and practice about how digital channel advertising really works. The empirical research in this thesis intends to fill this gap and shed light on the effectiveness of online advertising. Two studies are conducted that focus on multichannel online advertising and search engine advertising, the single-most important online ad channel. In an interdisciplinary approach, both studies first develop comprehensive theoretical models based on existing work in related research fields—for example, marketing and information retrieval. This approach pays off and leads to new and insightful findings: - There are synergies in multichannel online advertising: purchase propensity increases when consumers receive advertising messages through multiple channels. - The channel order can influence the conversion probability. - Click-through rates in search engine advertising are influenced through various keyword criteria on semantic and syntactic level The results of this thesis constitute an important starting point for future research in online advertising. Furthermore, the results enable practitioners to improve the effectiveness of online advertising through a more differentiated campaign management approach. Based on its findings, the thesis outlines how a future integrated approach to online advertising could look like.
