Defiant Birth The digital age has had a profound effect on our cultural heritage and the academic research that studies it. Staggering amounts of objects, many of them of a textual nature, are being digitised to make them more readily accessible to both experts and laypersons. Besides a vast potential for more effective and efficient preservation, management, and presentation, digitisation offers opportunities to work with cultural heritage data in ways that were never feasible or even imagined. To explore and exploit these possibilities, an interdisciplinary approach is needed, bringing together experts from cultural heritage, the social sciences and humanities on the one hand, and information technology on the other. Due to a prevalence of textual data in these domains, language technology has a crucial role to play in this endeavour. Language technology can break through the "Google barrier" by offering the potential to analyse texts at advanced levels, extracting information and knowledge at the level of the humanities or social sciences researcher, who wants to know about the who, what, where, and when, but also the how and the why. At the same time cultural heritage data poses considerable challenges for existing language technology: technology aimed at "generic" language has to face such disparate problems as historical language variation, OCR digitisation errors, and near-extinct academic expertise. This book is primarily intended for researchers in information technology and language processing who would like to receive a state-of-the-art overview of the whole breadth of the new and vibrant field of language technology for cultural heritage and its associated academic research in the humanities and social sciences. Researchers working in the target domains of cultural heritage, the social sciences and humanities will also find this book useful, as it provides an overview of how language technology can help them with their information needs. The book covers applications ranging from pre-processing and data cleaning, to the adaptation and compilation of linguistic resources, to personalisation, narrative analysis, visualisation and retrieval.

Dutch Commerce and Chinese Merchants in Java Since his New York Times op-ed column debuted in 2011, Mark Bittman has emerged as one of our most impassioned and opinionated observers of the food landscape. The Times' only dedicated opinion columnist covering the food beat, Bittman routinely makes readers think twice about how the food we eat is produced, distributed, and cooked, and shines a bright light on the profound impact that diet—both good and bad—can have on our health and that of the planet. In *A Bone to Pick*, Mark's most memorable and thought-provoking columns are compiled into a single volume for the first time. As abundant and safe as the American food supply appears to be, the state of our health reveals the presence of staggering deficiencies in both the system that produces food and the forces that regulate it. Bittman leaves no issue unexamined; agricultural practices, government legislation, fad diets, and corporate greed all come under scrutiny and show that the issues governing what ends up in our market basket and on our tables are both complex and often deliberately confusing. Unabashedly opinionated and invariably thought provoking, Bittman's columns have

helped readers decipher arcane policy, unpack scientific studies, and deflate affronts to common sense when it comes to determining what “ eating well ” truly means. As urgent as the situation is, Mark contends that we can be optimistic about the future of our food and its impact on our health, as slow-food movements, better school-lunch programs, and even “ healthy fast food ” become part of the norm. At once inspiring, engaging, and enlightening, *A Bone to Pick* is an essential resource for every reader eager to understand not only the complexities inherent in the American food system, but also the many opportunities that exist to improve it.

Prostate Cancer For Dummies This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. A highly visual, step-by-step approach to solving engineering problems with Excel. Specifically targeted at first-year engineering students, this text seeks to teach the basic Excel skills that undergraduates will use in the first few years of engineering courses. This book was written with the understanding that students get frustrated by multi-step procedures that illustrate only the final outcome. Ron Larsen, in his hallmark approach, provides screen images for each and every step allowing students to easily follow along as they try to perform each task.

Forthcoming Books The Small Gas Engines Workbook includes a variety of questions, in various formats, to help reinforce the student's understanding of the material presented in the textbook chapters. Step-by-step jobs in the Workbook guide the students through important engine service procedures. The Workbook also includes sample Equipment & Engine Training Council (EETC) technician certification tests for the four-stroke and two-stroke areas of certification. These tests help the students prepare for EETC certification.

Curing Arthritis the Drug-Free Way Framing Meinzer's work in elegant historic context, preeminent Panhandle historian Frederick W. Rathjen gives us a rare appreciation of the topographic majesty of the Periman Red Beds that 230 to 280 million years ago lay below a shallow sea and through subsequent millennia and riverine deposit, erosion, and redeposit would gain 'variegated walls and formations of gray, yellow, maroon, lavender and orange shown most conspicuously in the lovely Spanish Skirts."

Understanding Healthcare Financial Management More than twelve million immigrants, many of them children, passed through Ellis Island's gates between 1892 and 1954. Children also came through the "Guardian of the Western Gate," the detention center on Angel Island in California that was designed to keep Chinese immigrants out of the United States. Based on the oral histories of fifty children who came to the United States before 1950, this book chronicles their American odyssey against the backdrop of World Wars I and II, the rise and fall of Hitler's Third Reich, and the hardships of the Great Depression. Ranging in age from four to sixteen years old, the children hailed from Northern, Central, Eastern, and Southern Europe; the Middle East; and China. Across ethnic lines, the child immigrants' life stories tell a remarkable tale of human resilience. The sources of family and community support that they relied on, their educational aims and accomplishments, their hard work, and their optimism about the future are just as crucial today for the new immigrants of the twenty-first century. These personal narratives offer unique perspectives on the psychological experience of being an immigrant child and its impact on later development and well-being. They chronicle the joys and sorrows, the aspirations and achievements, and the challenges that these small strangers faced while becoming grown citizens.

HFMA's Introduction to Hospital Accounting Comparative Health Systems: Global Perspectives explores the health systems of 17 countries through comparative study. Using a consistent framework, the chapters offer an overview of each country's history, geography, government, and economy, as well as a detailed analysis of the country's healthcare system facilities, workforce, technology, cost, quality, and access. Current and emerging issues are also explored. The book concludes with a look at the changing U.S. healthcare system and the global challenges and opportunities for health.

My Dad ' s a Policeman Set in the rich natural, cultural, and political landscape of Haida Gwaii, Islands' Spirit Rising examines the long-term conflict over the islands' ancient forests and recent events that unfolded in the context of collaborative land-use planning. In response to threats posed by a century of logging, a local indigenous-environmental-community movement built enough momentum to challenge the multinational forest industry and the political structures enabling it. This book traces the evolution of this dynamic force, from the early days of Haida resistance to the modern context of alliances, legal battles, and evolving forms of governance.

Canadiana The early twentieth century brought about the rejection by physicists of the doctrine of determinism - the belief that complete knowledge of the initial conditions of an interaction in nature allows precise and unambiguous prediction of the outcome. This book traces the origins of a central problem leading to this change in viewpoint and paradoxes raised by attempts to formulate a consistent theory of the nature of light. It outlines the different approaches adopted by members of different national cultures to the apparent inconsistencies, explains why Einstein's early (1905) attempt at a resolution was not taken seriously for fifteen years, and describes the mixture of ideas that created a route to a new, antideterministic formulation of the laws of nature. Dr Wheaton describes the experimental work on the new forms of radiation found at the turn of the century and shows how the interpretation of energy transfer from X-rays to matter gradually transformed a classical wave explanation of light to one based on particle like quanta of energy, and further, he explains how influential scientists came reluctantly to accept a wavelike interpretation of matter as well. This new and distinctively different account of one of the major theoretical shifts in modern physical thought will be of fundamental interest to physical scientists and philosophers, as well as to historians of science.

Darkness Unleashed This book presents an analysis of consumption patterns in the OECD (rich) and LDC (poor) countries using recent data (1960-1996) and econometric methodology for a number of broadly aggregated consumer goods. The income elasticity estimates for the 50 or so countries and 10 commodity groups are tabulated. The reliability of these elasticity estimates, and also the demand theory hypotheses, are investigated using simulation techniques.

The Law of Healthcare Administration I started writing my book the first day that I started taking classes at College of the Canyons. I didn't write the book in printing, I wrote in my heart. The title of my book is My Graduation, because I finished the day I graduated. I took my first class in the spring semester of 1989, my final class in the spring semester of 2005. My book talks about my struggles to get an education while raising a family, as well as the nostalgia for my old country and my love for my new country. In my book, I invite people to read and write. I also want to send a message of love and hope for a better life. How I wish that every immigrant learns English as soon as they come to this country. How I wish that every woman would achieve a college education. Yes, it is hard, but not impossible. The young woman that came to this country, with a big desire of an education, finally did it.

Financial Management Dutch Commerce and Chinese Merchants in Java describes the vanished commercial world of colonial Java. Alexander Claver shows the challenges of a demanding business environment by highlighting trade and finance mechanisms, and the relationships between the participants involved.

An Introduction to Medicinal Chemistry The essential concepts of both accounting and financial management are covered in this best-selling healthcare finance book. Through clear explanations, numerous examples, and realistic practice problems, it arms future managers with the grounding they need to make financially sound decisions for their healthcare organizations. This thoroughly updated edition provides more emphasis on the unique marketplace for healthcare services and additional examples from nonhospital settings, including medical practices, clinics, home health agencies, nursing homes, and managed care organizations.

The Sydney Language This book provides a balanced assessment of pay for performance (P4P), addressing both its promise and its shortcomings. P4P programs have become widespread in health care in just the past decade and have generated a great deal of enthusiasm in health policy circles and among legislators, despite limited evidence of their effectiveness. On a positive note, this movement has developed and tested many new types of health care payment systems and has stimulated much new thinking about how to improve quality of care and reduce the costs of health care. The current interest in P4P echoes earlier enthusiasms in health policy—such as those for capitation and managed care in the 1990s—that failed to live up to their early promise. The fate of P4P is not yet certain, but we can learn a number of lessons from experiences with P4P to date, and ways to improve the designs of P4P programs are becoming apparent. We anticipate that a “second generation” of P4P programs can now be developed that can have greater impact and be better integrated with other interventions to improve the quality of care and reduce costs.

My Graduation Now in its fifth edition, Powell and Baker ' s Business Analytics: The Art of Modeling with Spreadsheets provides students and business analysts with the technical knowledge and skill needed to develop real expertise in business modeling. In this book, the authors cover spreadsheet engineering, management science, and the modeling craft. The briefness & accessibility of this title offers opportunities to integrate other materials –such as cases -into the course. It can be used in any number of courses or departments where modeling is a key skill.

Business Analytics: The Art of Modeling With Spreadsheets, 5th Edition The multielement systems have been widely used in many fields of astronomy and radio science in the last decades. This is caused by the increasing demands on the resolution and sensitivity of such systems over the wide range of the electromagnetic wavelengths, from gamma up to radio. The ground-based optical and radio interferometers, gamma-ray and X-ray or bital telescopes, antenna arrays of radio telescopes and also some other radio devices belong to scientific instruments using multielement systems. Therefore, the current problems of the optimal construction of such systems, or precisely, those of searching for the best arrangement of the elements in them, were formulated. A rather large number of scientific papers, including those of the authors, is devoted to these problems, and we believe that the time has come to integrate the basic results of the papers into the monograph. The offered book consists of three parts. The first part is concerned with the optimal synthesis of optical and radio interferometers of various types and purposes; the synthesis of non-equidistant antenna arrays is considered in the second part; and the methods for the construction of coded masks for X-ray and gamma-ray orbital telescopes are expounded in the third one. Since in the text combinatorial constructions which are little known to astronomers are used, the necessary information is given in the appendices. Various tables containing the parameters of the systems considered are also represented.

cases are accompanied by spreadsheet models to help students perform the required analyses. The casebook also contains seven qualitative mini-cases created to highlight the ethical dilemmas that occasionally arise in the practice of healthcare finance. Important changes to this edition: All cases have been updated, and many have been revised extensively, including new exhibits, timely topics, and new calculations. Two new cases have been added to the book: One focuses on bond refunding and the other covers revenue cycle management. A new mini-case focuses on the potential ethical conflicts involved with physician-owned distributors (PODs). The PowerPoint slides have been changed to allow instructors to first present a short introduction to the case and then, after students have completed their analyses, review each case by discussing three key learning points.
