Geopolitics of the World System "Develops a geographic approach to the politics of spectacle and its unspectacular Others through examining recent spectacular capital city development projects in seven authoritarian, resource-rich states of Central Asia, the Arabian Peninsula, and East Asia"--

On Geopolitics This book brings together scholars from across a variety of academic disciplines to assess the current state of the subfield of popular geopolitics. It provides an archaeology of the field, maps the flows of various frameworks of analysis into (and out of) popular geopolitics, and charts a course forward for the discipline. It explores the real-world implications of popular culture, with a particular focus on the evolving interdisciplinary nature of popular geopolitics alongside interrelated disciplines including media, cultural, and gender studies.

GEOGRAPHICAL THOUGHT : A CONTEXTUAL HISTORY OF IDEAS On Geopolitics shows how the 'new geopolitics' combines the fields of geography and international relations to create a comprehensive overview of current political developments. Using recent developments in geographical technology as well as traditional theories and methods, Harvey Starr explores themes of spatiality and territoriality as they connect to international affairs. He also examines geopolitical dynamics beyond borders in a world now buffeted by non state actors and subject to intergovernmental institutions and norms. On Geopolitics is a brilliant synthesis of Starr's ongoing work on conflict and co-operation, alliances, opportunity, and willingness, within a geographic framework. At the same time, Starr points the way toward new tools and techniques for the study of globalisation and world politics.

Basic Principles of Geopolitics and History Written by one of the world's leading political geographers, this fully revised and updated textbook examines the dramatic changes wrought by ideological and economic forces unleashed by the end of the Cold War. Saul Cohen considers these forces in the context of their human and physical settings and explores their geographical influence on foreign policy and international relations.

Geography and Politics Among Nations Cohen argues that the emergence of the United States as the world's sole superpower and the process of globalization have failed to remove the importance of geography as a political and strategic factor of great import. After laying out the structural basis for his theory of geopolitical theory, he launches into an examination of how geopolitical realities have developed since World War II, a period that witnessed greater change than the preceding two and a half centuries. He then turns his attention to the meat of the book, separate examinations of each of the major world regions, including examinations of the important countries and their individual geopolitical realities.

Geopolitics Written by one of the world's leading political geographers, this fully revised and updated textbook examines the dramatic changes wrought by ideological, economic, sociocultural, and demographic changes unleashed since the end of the Cold War. Saul Cohen considers these forces in the context of their human and physical settings and explores their geographical influence on foreign policy and international relations.

The Geopolitics of Regional Power This book argues that in the twenty-first century Eastern Eurasia will replace Europe as the theatre of decision in international affairs, and that this new geographic and cultural context will have a strong influence on the future of world affairs. For half a millennium, the great powers have practised what might be called 'world politics', yet during that time Europe, and small portions of the Near East and North Africa strategically vital to Europe, were the 'centres of gravity' in international politics. This book argues that the 'unipolar moment' of the post-Cold War era will not be replaced by a US-China 'Cold War', but rather by a long period of multipolarity in the twenty-first century. Examining the policy goals and possible military-political strategies of several powers, this study explains how Washington may play a key role in eastern Eurasian affairs if it can learn to operate in a very different political context. Dale Walton also considers the rapid pace of technological change and how it will impact on great power politics. Considering India, China, the US, Russia, Japan, and other countries as part of a multipolar system, he addresses the central questions that will drive US policy in the coming decades. Geopolitics and the Great Powers in the 21st Century will be of interest to students of international security, military history, geopolitics, and international relations.

Geopolitics Making Political Geography acquaints readers with the major issues and conceptual problems that have dominated the discipline over the past two to three decades. Besides discussing and assessing current themes, Agnew provides a historical analysis of the emergence of modern political geography from the 1890s onwards, identifies and discusses the three "waves" of the revival of political geography during the last three decades, and discusses evidence for a new coherence to the discipline, centering around issues of geographical scale, place and politics, etc.

Geopolitics: A Guide to the Issues Engaging Geopolitics provides a comprehensive introduction to the influence of geography, demography and economics on politics and international relations in the world in which we live today. The authors' expressed aim is to make geopolitics more accessible to undergraduate students, with the hope that the book will be an ideal starting point for those who will be moving vertically into more advanced courses in political geography or laterally into other concerns of international affairs.

Geopolitics Geopolitical conditions influence all strategic behaviour - even when cooperation among different kinds of military power is expected as the norm, action has to be planned and executed in specific physical environments. The geographical world cannot be avoided, and it happens to be 'organized' into land, sea, air and space - and possibly the electromagnetic spectrum including

'cyberspace'. Although the meaning of geography for strategy is a perpetual historical theme, explicit theory on the subject is only one hundred years old. Ideas about the implication of geographical, especially spatial, relationships for political power - which is to say 'geopolitics'- flourished early in the twentieth century. Divided into theory and practice sections, this volume covers the big names such as Mackinder, Mahan and Haushofer, as well as looking back at the vital influence of weather and geography on naval power in the long age of sail (sixteenth to nineteenth centuries). It also looks forward to the consequences of the revival of geopolitics in post-Soviet Russia and the new space-based field of "astropolitics".

The Genesis of Geopolitics and Friedrich Ratzel This authoritative Handbook presents a comprehensive analysis of the spatial transformation of the state; a pivotal process of globalization. It explores the state as an ongoing project that is always changing, illuminating the new spaces of geopolitics that arise from these political, social, cultural, and environmental negotiations.

Critical Geopolitics of the Polar Regions The International Encyclopedia of Human Geography provides an authoritative and comprehensive source of information on the discipline of human geography and its constituent, and related, subject areas. The encyclopedia includes over 1,000 detailed entries on philosophy and theory, key concepts, methods and practices, biographies of notable geographers, and geographical thought and praxis in different parts of the world. This groundbreaking project covers every field of human geography and the discipline's relationships to other disciplines, and is global in scope, involving an international set of contributors. Given its broad, inclusive scope and unique online accessibility, it is anticipated that the International Encyclopedia of Human Geography will become the major reference work for the discipline over the coming decades. The Encyclopedia will be available in both limited edition print and online via ScienceDirect - featuring extensive browsing, searching, and internal cross-referencing between articles in the work, plus dynamic linking to journal articles and abstract databases, making navigation flexible and easy. For more information, pricing options and availability visit http://info.sciencedirect.com/content/books/ref_works/coming/ Available online on ScienceDirect and in limited edition print format Broad, interdisciplinary coverage across human geography: Philosophy, Methods, People, Social/Cultural, Political, Economic, Development, Health, Cartography, Urban, Historical, Regional Comprehensive and unique - the first of its kind in human geography

Engaging Geopolitics Grygiel asserts that, though many other aspects of foreign policy have changed throughout history, strategic response to geographical features remains one of the most salient factors in establishing and maintaining power in the international arena.

The Geopolitics of Spectacle This concise introduction to the growth and evolution of geopolitics as a discipline includes biographical information on its leading historical and contemporary practitioners and detailed analysis of its literature. • Biographies of major current geopolitical scholars and descriptions and listings of their works • Maps of geopolitical crisis areas, such as Afghanistan/Pakistan, the South China Sea, and the Straits of Malacca • Quotations from various government and military primary source documents • A glossary of geopolitical terms • A bibliography of international scholarly resources, including government and military documents

The Return of Geopolitics in Europe? The book charts out the history of Geographical Thought from early times to the present day in a single compact volume. Its main focus is on the modern period—beginning with Humboldt and Ritter—more specifically on conceptual developments since the Second World War. NEW TO THE SECOND EDITION The second edition is thoroughly revised and incorporates five new chapters dealing with: ? Nature, Method, Basic Ideas and Conceptual Structure of Geography ? The Problem of Dualities and How it was Resolved ? Nature and Role of Geography as a Social Science—Geographical vs. Sociological Imagination ? Time vis-à-vis Space—The Pattern-

Social Geographies Now in a thoroughly revised edition, this innovative textbook surveys the field of popular geopolitics, exploring the relationship between popular culture and international relations from a geographical perspective. Using colorful current examples, it brings together a diverse, multidisciplinary literature and makes it understandable and relevant.

Political Geography This volume examines geopolitics by looking at the interaction between geography, strategy and history. This book addresses three interrelated questions: why does the geographical scope of political objectives and subsequent strategy of states change? How do these changes occur? Over what period of time do these changes occur? The theories of Sir Halford Mackinder and Nicholas Spykman are examined in order to provide an analytical narrative for five case studies, four historical and one contemporary. Taken together they offer the prospect of converting descriptions of historical change into analytic explanations, thereby highlighting the importance of a number of commonly overlooked variables. In addition, the case studies will illuminate the challenges that states face when attempting to change the scope of their foreign policy and geo-strategy in response to shifts in the geopolitical reality. This book breaks new ground in seeking to provide a way to understand why and how the geographical scope of political objectives and subsequent strategy both expands and contracts. This book will be of much interest to students of geopolitics, strategic studies, military history, and international relations.

Geopolitics and the Quest for Dominance Written by one of the world's leading political geographers, this fully revised and updated textbook examines the dramatic changes wrought by ideological and economic forces unleashed by the end of the Cold War. Saul Bernard Cohen considers these forces in the context of their human and physical settings and explores their geographical influence on foreign policy and international relations.

Prisoners of Geography In the last two decades, various states from the Global South have emerged as important players in international relations. Most popular among them is China. Brazil, India and South Africa have also taken essential roles in global and regional politics. Compared to traditional great powers, they can be labelled 'regional great powers' or 'regional powers' because their influence is - with the exception of China - concentrated on their neighbourhood. The impact of regions, meaning the impact of geography, on the economics and politics of regional powers is surprisingly understudied. This book analyses how geographical conditions influence the regional economics and politics of South Africa, allowing the author to delineate its region of influence.

Popular Geopolitics Marking the renaissance of social geographies in recent years, this major textbook showcases the breadth of conceptual and empirical approaches that scholars now utilize to understand contemporary social issues through a spatial lens. The book is collectively authored by one of the largest groups of social geographers in the world. It develops a vision of social geographies that is rooted in the commitments that have characterised the sub-discipline for at least half a decade (e.g. society-space relations, justice, equality), while incorporating new approaches, theories and concerns (e.g. emotions, performance, and the more-than-human). Embracing the increasing porosity of our work with neighbouring economic, cultural, political and environmental geographies, the book provides a round-up of the state of the sub-discipline, capturing recent directions and charting new questions and challenges for theory, research and practice. It makes sense of the bewildering variety

of contemporary social geographical interests, from longstanding topics (e.g. race, class and gender) to more recent interests (e.g. sustainability, digital worlds and social change). Above all, it makes clear the relevance and contributions of social geographies not only to understanding a wide range of global and local issues, but to social change alongside communities, policy-makers and social movements. Each chapter offers an introduction to current work in social geographies, providing an overview and in-depth examples. The book has these key features that make it an essential resource for any social geography course: An accessible and engaging style that is ideal for entry level students Definitions of key terms and carefully explained concepts and ideas A range of exciting contemporary examples from a wide variety of geographical settings, including those drawn from the authors' recent research Cross-referencing between chapters to help students expand learning Illustration with photos, tables, diagrams and other material Suggestions for further reading in each chapter "Real world research" and "real world theory" textboxes providing examples of research projects and theoretical perspectives, bringing topics alive and exploring challenges on the ground

Geopolitics This thought-provoking and clearly argued text provides a critical geopolitical lens for understanding global environment politics. A subfield of political geography, environmental geopolitics examines how environmental themes are used to support geopolitical arguments and physical realities of power and place. Shannon O'Lear considers common, problematic traits of such familiar but widely misunderstood narratives about human-environment relationships. Mainstream themes about human-environment relationships include narratives about presumed connections between human population trends and resource scarcity; ways in which conflict and violence are linked to resource use or environmental degradation; climate security; and the application of science to solve environmental problems. O'Lear questions these narratives, arguing that the role or meaning of the environment is rarely specified, humans' role in these situations tends to be considered selectively, and little attention is paid to spatial dimensions of human-environment relationships. She shows that how we tend to think about environmental concerns often obscure value judgments and constrain more dynamic approaches to human-environment relationships. Environmental geopolitics demonstrates how we can question familiar assumptions to generate more just and creative approaches to our many relationships with the environment.

and subsequent strategy both expands and contracts. This book will be of much interest to students of geopolitics, strategic studies, military history, and international relations.

Geopolitics and Development Geopolitics and Development examines the historical emergence of development as a form of governmentality, from the end of empire to the Cold War and the War on Terror. It illustrates the various ways in which the meanings and relations of development as a discourse, an apparatus and an aspiration, have been geopolitically imagined and enframed. The book traces some of the multiple historical associations between development and diplomacy and seeks to underline the centrality of questions of territory, security, statehood and sovereignty to the pursuit of development, along with its enrolment in various (b)ordering practices. In making a case for greater attention to the evolving nexus between geopolitics and development and with particular reference to Africa, the book explores the historical and contemporary geopolitics of foreign aid, the interconnections between development and counterinsurgency, the role of the state and social movements in (re)imagining development, the rise of (re)emerging donors like China, India and Brazil, and the growing significance of South–South flows of investment, trade and development cooperation. Drawing on post-colonial and postdevelopment approaches and on some of the author's own original empirical research, this is an essential, critical and interdisciplinary analysis of the complex and dynamic political geographies of global development. Primarily intended for scholars and post-graduate students in development studies, human geography, African studies and international relations, this book provides an engaging, invaluable and up-to-date resource for making sense of the complex entanglement between geopolitics and development, past and present.

Fourth World Geopolitical Reader I A comparative study of the relationship between the end of the Cold War and the resurgence of geopolitics in Europe.

Introduction to Geopolitics This book, originally published in 1986, shows the importance of geography in international power politics and shows how geopolitical thought influences policy-making and action. It considers the various elements within international power politics such as ideologies, territorial competition and spheres of influences, and shows how geographical considerations are crucial to each element. It considers the effects of distance on global power politics and explores how the geography of international communication and contact and the geography of economic and social patterns change over time and affect international power balances.

Geography of International Affairs **Geography and Politics Among Nations** is intended to assist the general reader to grasp the significance of geopolitical awareness in the conduct of foreign relations. Toward this end, the book begins with a cursory review of selected examples of geopolitical thought from antiquity to the present, which illustrates some of the main tendencies in geopolitical thinking throughout history. This survey of both past and recent geopolitical thinking is followed by a discussion of the intimate relationship between geographical and geostrategic considerations and realistic foreign policy, and then continues with consideration of basic factors affecting geopolitical decision-making such as the size of a state, its configuration, climate, and often most critically its global and regional location. This is followed by a discussion of the frontiers, boundaries, and borderlands that separate and define the territories of states and the impact on them of technological advancements, which is then followed by an examination of the variety of territorial disputes among nations, past and present, many of which remain unresolved. The book concludes with a brief discussion of some of the continuing and prospective geopolitical challenges that are likely to be confronted in the course of the present century.

Geography once again shows itself fit to tackle a frequently and rapidly changing geopolitical landscape. It retains the intellectual clarity, rigour and vision of previous editions based upon its world-systems approach, and is complemented by the perspective of feminist geography. The book successfully integrates the complexity of individuals with the complexity of the world-economy by merging the compatible, but different, research agendas of the co-authors. This edition explores the importance of states in corporate globalization, challenges to this globalization, and the increasingly influential role of China. It also discusses the dynamics of the capitalist world-economy and the constant tension between the global scale of economic processes and the territorialization of politics in the current context of geopolitical change. The chapters have been updated with new examples – new sections on art and war, intimate geopolitics and geopolitical constructs reflect the vibrancy and diversity of the academic study of the subject. Sections have been updated and added to the material of the previous edition to reflect the role of the so-called Islamic State in global geopolitics. The book offers a framework to help students make their own judgements of how we got where we are today, and what may or should be done about it. Political Geography remains a core text for students of political geography, geopolitics, international relations and political science, as well as more broadly across human geography and the social sciences.

The Geopolitics of Regional Power This proceedings book addresses the main issues of contemporary political geography and international relations, providing a platform for discussion and collaboration of experts in the fields of Political Geography, Geopolitics, International Relations, and International Law. Participants from all over the world consider the controversies and challenges posed by globalization, focusing, in particular, on the ideologies of globalization and regionalism, migration crises, prevention of ethnic conflicts, and measures to counteract racism, xenophobia, and extremism

Geopolitics and the Great Powers in the 21st Century This clear and concise introductory textbook guides students through their first engagement with geopolitics. It offers a clear framework for understanding contemporary conflicts by showing how geography provides opportunities and limits upon the actions of countries, national groups, and terrorist organizations. This second edition is fundamentally restructured to emphasize geopolitical agency, and non-state actors. The text is fully revised, containing a brand new chapter on environmental geopolitics, which includes discussion of climate change and resource conflicts. The text contains updated case studies, such as the Korean conflict, Israel-Palestine and Chechnya and Kashmir, to emphasize the multi-faceted nature of conflict. These, along with guided exercises, help explain contemporary global power struggles, environmental geopolitics, the global military actions of the United States, the persistence of nationalist conflicts, the changing role of borders, and the new geopolitics of terrorism, and peace movements. Throughout, the readers are introduced to different theoretical perspectives, including feminist contributions, as both the practice and representation of geopolitics are discussed. **Introduction to Geopolitics** is an ideal introductory text which provides a deeper and critical understanding of current affairs, geopolitical structures and agents. The text is extensively illustrated with diagrams, maps, photographs and end of chapter further reading. Both students and general readers alike will find this book an essential stepping-stone to understanding contemporary conflicts.

Making Political Geography Focusing on both Polar Regions, this book provides a comprehensive understanding of political processes related to the rapidly changing Arctic and Antarctic, where the environmental impacts of human activities are extremely visible. Environmental changes in the Arctic and the Antarctic are increasingly seen as barometers of the global impact of human activities, while newly arising economic opportunities in both Polar Regions prompt predictions that they will be the site of future conflicts. This book maps and analyses the different actors involved in the politics of the Polar Regions to explain why similar patterns of interpretation of such major issues have become dominant in practical, popular and formal geopolitical discourses. Disentangling the politics, the author illustrates how the ordering principles have evolved, explains recent dynamics in political

processes and provides the groundwork needed to better forecast future trends. By focusing on the Americas, the only continent that borders both Polar Regions, the author shows how geographic proximity inspires interaction and cooperation among state and non-state actors in very different ways. This volume will be of interest to scholars and students of political science, political geography, international relations, global governance and cultural studies. It will have an international appeal particularly in the Americas, and other countries with growing interests in the Polar Regions.

Great Powers and Geopolitical Change History and geography delineate the operation of power, not only its range but also the capacity to plan and the ability to implement. Approaching state strategy and policy from the spatial angle, Jeremy Black argues that just as the perception of power is central to issues of power, so place, and its constraints and relationships, is partly a matter of perception, not merely map coordinates. Geopolitics, he maintains, is as much about ideas and perception as it is about the actual spatial dimensions of power. Black's study ranges widely, examining geography and the spatial nature of state power from the 15th century to the present day. He considers the rise of British power, geopolitics and the age of Imperialism, the Nazis and World War II, and the Cold War, and he looks at the key theorists of the latter 20th century, including Henry Kissinger, Francis Fukuyama and Samuel P. Huntington, Philip Bobbitt, Niall Ferguson, and others.

Environmental Geopolitics This book, originally published in 1986, shows the importance of geography in international power politics and shows how geopolitical thought influences policy-making and action. It considers the various elements within international power politics such as ideologies, territorial competition and spheres of influences, and shows how geographical considerations are crucial to each element. It considers the effects of distance on global power politics and explores how the geography of international communication and contact and the geography of economic and social patterns change over time and affect international power balances.

Geopolitics (Routledge Library Editions: Political Geography) This book discusses the influence of Friedrich Ratzel's ideas in more contemporary geopolitical analytical systems and the geodeterminism commonly attributed to him. The author thoroughly analyzes the structural components of Ratzel's thought. The research is inspired by the numerous contradictory approaches in the secondary literature, presenting Ratzel as both humanist and racist, geo-determinist and multidimensional analyst, organicist and social scientist, precursor of Geopolitics and opponent to the same idea. In this work, more particular issues are approached: the establishment of a scientific Political Geography; the methodological approach of his multidisciplinary work; the redefinition of his geopolitical period; his notion of state and the evaluation of sociological and cultural parameters as factors of state power; the biogeographical content of the notion of Lebensraum; his attitude towards the racist theories as well as towards the Darwinian theories; his overall worldview and the confrontation with cosmopolitanism; his contribution to an interdisciplinary, positivist and scientific approach in analyzing social and international affairs; his thoughts on the architecture of Europe. The book will be useful for researchers and students in many scientific fields, such as International Relations, Geopolitics, Geography and History of Geography.
