This important resource presents a total survey error framework that is a useful compass for charting the dangerous waters between systematic and random errors that inevitably accompany the survey design enterprise. In addition, three new studies based on national, international, and state and local surveys—the UNICEF Multiple Indicator

Estimating Healthy Life Expectancies Using Longitudinal Survey Data How should we help equip the church leaders of Africa today? There remains a well-documented lack of theologically sound, Bible-centric preaching in Sub-Saharan Africa. The majority of sermons are preached by untrained (or undertrained) church leaders. Following a practical theology praxis, this book develops a conceptual framework for the evaluation of existing “alternative” approaches to “grassroots” preacher training. It also proposes broad principles for effective preacher training, and offers a practical solution. The 20th century had seen the Christian church in Africa grow 36 fold to 360

million. This amazing growth is arguably “the largest religious change in human history in such a short period.” It has shifted the focus of Christianity from North to South. This rapid growth is – debatably – considered by some missiologists and theologians to have resulted in an African church “a mile wide and an inch deep.” That is, a church of great size but lacking in spiritual depth. The rapid growth has led to insufficient numbers of trained leaders being available to oversee their congregations. Most leaders are unpaid. Untrained or undertrained leaders have an inadequate knowledge of scripture, and lack understanding of its interpretation. They also lack the skills they need to communicate its truths. Even so, they preach up to 90% of the sermons in rural Africa. Despite a tremendous hunger for training among many of those preachers, “traditional” college based theological education cannot keep up with the demand for trained pastors and preachers in an affordable or culturally appropriate manner.

World History The first comprehensive presentation of reduction semantics in one volume, and the first tool set for such forms of semantics. This text is the first comprehensive presentation of reduction semantics in one volume; it also introduces the first reliable and easy-to-use tool set for such forms of semantics. Software engineers have long known that automatic tool support is critical for rapid prototyping and modeling, and this book is addressed to the working semantics engineer (graduate student or professional language designer). The book comes with a prototyping tool suite to develop, explore, test, debug, and publish semantic models of programming languages. With PLT Redex, semanticists can formulate models as grammars and reduction models on their computers with the ease of paper and pencil. The text first presents a framework for the formulation of language models, focusing on equational calculi and abstract machines, then introduces PLT Redex, a suite of software tools for expressing these models as PLT Redex models. Finally, experts describe a range of models formulated in Redex. PLT Redex comes with the PLT Scheme implementation, available free at <http://www.plt-scheme.org/>. Readers can download the software and experiment with Redex as they work their way through the book.
