Ethics in the era of managed care This collection of AMA Council Reports from 1990 to 1997 examine a variety of ethical issues concerning managed care. Report topics include financial incentives to limit care, cost containment involving prescription drugs, restrictions on disclosure in managed care contracts, ethical issues in negotiating discounts for specialty care, capitation, and more. An analysis of current issues in medical ethics is also included.

Concise Textbook of Human Physiology
Phlebotomy uses large, hollow needles to remove blood specimens for lab testing or blood donation. Each step in the process carries risks - both for patients and health workers. Patients may be bruised. Health workers may receive needle-stick injuries. Both can become infected with bloodborne organisms such as hepatitis B, HIV, syphilis or malaria. Moreover, each step affects the quality of the specimen and the diagnosis. A contaminated specimen will produce a misdiagnosis. Clerical errors can prove fatal. The new WHO guidelines provide recommended steps for safe phlebotomy and reiterate accepted principles for drawing, collecting blood and transporting blood to laboratories/blood banks.

Take Care of Your Type Registered Dietitian Exam Practice Questions are the simplest way to prepare for the Registered Dietitian test. Practice is an essential part of preparing for a test and improving a test taker's chance of success. The best way to practice taking a test is by going through lots of practice test questions. Our Registered Dietitian Exam Practice Questions give you the opportunity to test your knowledge on a set of questions. You can know everything that is going to be covered on the test and it will not do you any good on test day if you have not had a chance to practice. Repetition is a key to success and using practice test questions allows you to reinforce your strengths and improve your weaknesses. Detailed answer explanations are also included for each question. It may sound obvious, but you have to know which questions you missed (and more importantly why you missed them) to be able to avoid making the same mistakes again when you take the real test. That's why our Registered Dietitian Exam Practice Questions include answer keys with detailed answer explanations. These in-depth answer explanations will allow you to better understand any questions that were difficult for you or that you needed more help to understand.

Essential Revision Notes in Medicine for Students The book is targeted at the candidates appearing for the MRCOG Part 2, which is a compulsory examination for postgraduate trainees in the UK who aspire to pursue a career in obstetrics and gynaecology. Apart from the UK postgraduates, MRCOG examination is taken by postgraduates all across the globe to obtain this prestigious degree. The examination is carried out twice a year, and the venues are London, Manchester, Glasgow and Belfast in the UK. The examination also takes place in Bangladesh, Egypt, Hong Kong, India (2 centres), Iraq, Jordan, Malaysia, Pakistan, Saudi Arabia, Sudan, Dubai and Jamaica. At each centre, the number of candidates participating varies between 5 and 200. Apart from the candidates appearing for this examination, this book would be helpful for the assessment of knowledge in all postgraduate trainees in obstetrics and gynaecology worldwide. Therefore, this book has a wide target group. A unique characteristic of this book is that it produces a comprehensive set of both types of questions covering all the modules of the MRCOG Part 2 syllabus (www.rcog.org.uk). A broad range of reading material has been used to develop the EMQs and SBAs including RCOG Greentop Guidelines, Scientific Impact Papers, Clinical Governance Papers and RCOG Consent Advice. In addition to the RCOG revision material, the authors have included questions from *The Obstetrician & Gynaecologist (TOG)*, *NICE Guidelines*, *StratOG* and recommended textbooks. The authors have experience in MRCOG examination question writing, and Sharmistha Guha has been a co-lead for the London SBA Writing Group for the RCOG. The questions have been written to the same standard as the RCOG question bank. Mr. Gregory Ward, who is the Head of London Specialty School of Obstetrics and Gynaecology, wrote the foreword of the book. He is a senior clinician, a RCOG examiner and member of the RCOG SBA committee. He has provided guidance continually to ensure the quality of the questions is up to the standard of RCOG. It is important to recognize that this book is not a textbook and should not be used as the sole reading material for the examination. However, the questions will be especially useful in gaining valuable examination practice. An explanation has been provided for all of the questions along with references to aid in the preparation. A reading guide has been provided for assistance. The authors hope that this will be a useful tool in preparation for this crucial examination.

Logistics management operationalised in a healthcare context

MCQs for the New MRCPsych Paper A with Answers Explained Healthcare improvements is constantly relevant and an important topic. Healthcare is frequently being called upon to be more cost-efficient and still fulfil demands regarding waiting times, quality and availability. Experience from structural changes in other contexts gives reason to be positive about the potential for logistics improvements in the healthcare sector as well. From a logistics perspective patients pass different care functions, units, organisations and health facilities. It is assumed that logistics management knowledge applied in healthcare can lead to lower costs, shorter waiting times, better patient service, shorter treatment times and increased capacity. This dissertation therefore presents an exploration of how logistics management theories can be operationalised in a healthcare context to understand care chain effectiveness. Theoretically, the operationalisation is done by systems theory creating compatibility between logistics management theories and the healthcare context. As a first step, features for a logistics system forms features for achieving care chain effectiveness. High care chain effectiveness is thus a desired condition and the care delivery system is the tool to achieve it. As the final step in the operationalisation the features for care chain effectiveness are in turn used to analyse today's practices. Empirically, the research is based on qualitative data from a single case study with multiple units of analysis. It includes four care units at one of Sweden's university hospitals, where the data is gathered through interviews, insight into management systems and document analysis. One of the main results is the 21 areas identified for analysing today's practices by means of features for care chain effectiveness. Another main result is the four important concepts revealed through the operationalisation: Lead time - the episode of care from order to delivery as the amount of time for patient cases between first contact with healthcare and the last. Patient order fulfilment - fulfilment of patients' needs, broken down into several smaller steps performed over time within different care units in one or several organisations, consisting of five sub-processes - order handling, diagnosis, treatment, follow-up, and discharge. True demand - patients' needs that is to be met and thus sets what care to deliver, i.e. the production plan and the subordinate resource plan. System boundaries - defines which care units to include when focusing on the care delivery system's performance as a whole and should be more important than the performance and productivity of each individual care unit. A number of direct suggestions for care chain improvement can also be found in the concluding remarks, for example that objectives linked to economic influx or penalty narrow the system and that lead time data on an aggregated level is needed to cover episodes of care. The theoretical contribution of the dissertation is to the field of logistics management through the methodological development of using these theories in a new context. The managerial contribution is to healthcare managers through providing opportunities to improve care chains primarily by means of a greater understanding of care delivery systems.

WHO Guidelines on Hand Hygiene in Health Care

Exam 77-420 Microsoft Excel 2013 The WHO Guidelines on Hand Hygiene in Health Care provide health-care workers (HCWs), hospital administrators and health authorities with a thorough review of evidence on hand hygiene in health care and specific recommendations to improve practices and reduce transmission of pathogenic microorganisms to patients and HCWs. The present Guidelines are intended to be implemented in any situation in which health care is delivered either to a patient or to a specific group in a population. Therefore, this concept applies to all settings where health care is permanently or occasionally performed, such as home care by birth attendants. Definitions of health-care settings are proposed in Appendix 1. These Guidelines and the associated WHO Multimodal Hand Hygiene Improvement Strategy and an Implementation Toolkit (<http://www.who.int/gpsc/en/>) are designed to offer health-care facilities in Member States a conceptual framework and practical tools for the application of recommendations in practice at the bedside. While ensuring consistency with the Guidelines recommendations, individual adaptation according to local regulations, settings, needs, and resources is desirable. This extensive review includes in one document sufficient technical information to support training materials and help plan implementation strategies. The document comprises six parts.
