The hilarious first novel by the #1 bestselling author of Running with Scissors, Dry, A Wolf at the Table, and You Better Not Cry, Sellevision is Augusten Burrough's darkly funny and vastly entertaining skewering of a very troubled home-shopping channel. Welcome to the world of Sellevision, America's premier retail broadcasting network. When Max Andrews, the much loved and handsome (that is, lonely and gay) host of a "Toys for Tots" segment, accidentally exposes himself in front of millions of kids, Sellevision faces its first big scandal. As Max struggles to find a new job in television, the popular and perky host Peggy Jean Smythe is receiving sinister emails from a stalker. Popping pills and drinking heavily, she fails to notice that her husband is spending a lot of time with the young babysitter who lives next door. Then there's Leigh, whose affair with married Sellevision boss Howard Toast is going nowhere until she announces their relationship on air. A blistering satire of our overcharged, scandal-obsessed world, Sellevision is "an absolute howl . . . wicked fun" (New York Daily News).

Introductory Biomechanics is a new, integrated text written specifically for engineering students. It provides a broad overview of this important branch of the rapidly growing field of bioengineering. A wide selection of topics is presented, ranging from the mechanics of single cells to the dynamics of human movement. No prior biological knowledge is assumed and in each chapter, the relevant anatomy and physiology are first described. The biological system is then analyzed from a mechanical viewpoint by reducing it to its essential elements, using the laws of mechanics and then tying mechanical insights back to biological function. This integrated approach provides students with a deeper understanding of both the mechanics and the biology than from qualitative study alone. The text is supported by a wealth of illustrations, tables and examples, a large selection of suitable problems and hundreds of current references, making it an essential textbook for any biomechanics course.

Appropriate for undergraduate-level courses in Introduction to Engineering Experimentation found in departments of Mechanical, Aeronautical, Civil, and Electrical Engineering.
