"When an investigation into a series of mysterious deaths leads agents to an elite prep school for rebellious kids, MI6 assigns Alex Rider to the case. Before he knows it, Alex is hanging out with the sons of the rich and powerful, and something feels wrong. These former juvenile delinquents have turned well-behaved, studious--and identical--overnight. It's up to Alex to find out who is masterminding this nefarious plot, before they find him."--Provided by publisher.

Crane Safety on Construction Sites (ASCE Manuals and Reports on Engineering Practice No. 93) was written to aid the construction industry in the management of crane operations. Crane operations in construction range from unloading and setting equipment on a one-time basis to using numerous cranes that perform

multiple tasks on larger complex projects. This manual addresses these variables by clearly defining and assigning crane management responsibilities. It discusses issues such as safety plans, responsibilities, supervision and management, operations, training, manufacture, crane safety devices, and regulations in some detail as they relate to crane management. Appendixes are provided that list additional resources, manufacturers of crane safety devices, and explore case studies of crane accidents.

This book presents the proceedings of the 8th International Conference on Engineering, Project, and Product Management (EPPM 2017), highlighting the importance of engineering, project and product management in a region of the world that is in need of transformation and rebuilding. The aim of the conference was to bring together the greatest minds in engineering and management and offer them a platform to share their innovative, and potentially transformational, findings. The proceedings are comprehensive, multidisciplinary, and advanced in their approach with an appeal not only for academicians and university students but also for professionals in various engineering fields, especially construction, manufacturing and production.

This handbook addresses problems facing the engineer when preparing to build, both during the contract bidding phase and after a contract has been concluded. It offers clear guidelines for planning the resources and machinery on site, as well as the safe positioning of roads, cranes, storage and temporary buildings. Site planning activities are presented here in logical sequence, offering an efficient and safe design of the construction site and of the temporary works. The book describes the process of engineering preparation of on-site construction works in all phases of the construction life-cycle, from the design phase - preparing the financial plan and procurement scheme for the owner before tendering the contract; the tendering phase; and after bid completion. A list of procedures is presented for planning the construction site in order to simplify the engineer's work of site and temporary works planning. The Engineer's Manual of Construction Site Planning is for all those involved in the planning of construction sites, construction managers, construction engineers and quantity surveyors, as well as for students in civil engineering and construction.

The Way to Christ was the first published book of German mystic JACOB BOEHME (1575-1624), who received a revelatory vision in 1600 while watching a beam of sunlight reflect in a metal dish. A spiritual guide for Christians, this book contains Boehme's method for attaining enlightenment and unity with God. He offers prayers for readers to repeat and guides them through the repentance that is necessary in finding Christ. Lost souls and Christians out of touch with their

Chernousenko's "Chernobyl" is a first-hand account of the events and facts surrounding this global disaster: The first part of the book includes an absorbing account of what happened at Chernobyl nuclear power station on April 26, 1986, as well as a review of the rectification measures taken so far. The author re-analyzes the causes of the accident, confronting us with startling details about critical design faults in the (RBMK) reactors of the Chernobyl type. - The second part deals with the long-range and long-term effects of the catastrophe on man and environment, including a wealth of yet unpublished data along with proposals for future action. - Physicist Vladimir Chernousenko is eminently qualified to write on this topic: In 1986 he was appointed representative of the Ukrainian Academy of Sciences in Chernobyl and the "Zone". He worked in the so-called Special Zone (10-km radius around the reactor) where he received large radiation doses. He was co-author of the internal Government Report for President Gorbachev and the Supreme Soviet. Until 1991 he was scientific director of the 30-km exclusion zone. - This book is a vital step towards establishing the truth about the causes of the accident and - even more important - the actual scale of its aftermath. It provides the specialist with the scientific and medical data needed for further investigation and for designing effective countermeasures, while the lay reader will profit most from the absorbing accounts and personal statements of eyewitnesses and other people directly affected by the catastrophe. - A unique collection of photographs adds further poignancy to the written descriptions. Appendices are added to explain the most important technical terms for the non-specialist and to provide technical details for the specialist. The book is of equal interest to natural scientists, medics and interested laypersons.
