Labour law has traditionally aimed to protect the employee under a hierarchy built on constitutional provisions, statutory law, collective agreements at various levels, and the employment contract, in that order. However, in employment regulation in recent years, 'flexibility' has come to dominate the world of work - a set of policies that reshuffle the relationship among the fundamental pillars of labour law and inevitably lead to degrading the protection of employees. This book, the first-ever to consider the sources of labour law from a comparative perspective, details the ways in which the traditional hierarchy of sources has been altered, presenting an international view on major cross-cutting issues followed by fifteen country reports. The authors' analysis of the changing hierarchy of labour law sources in the light of recent trends includes such elements as the following: the constitutional dimension of labour rights; the normative intervention by the State; the regulatory function of collective bargaining and agreements; the hierarchical organization of labour law sources and the 'principle of favour'; the role played by case law in both common law and civil law countries; the impact of the European Economic Governance; decentralization of collective bargaining; employment conditions as key components of global competitive strategies; statutory schemes that allow employees to sign away their rights. National reports - Australia, Brazil, China, Denmark, France, Germany, Hungary, Italy, Poland, Russia, Spain, Sweden, South Africa, the United Kingdom and the United States - describe the structure of labour law regulations in each legal system with emphasis on the current state of affairs. The authors, all distinguished labour law scholars in their countries, thus collectively provide a thorough and comprehensive commentary on labour law regulation and recent tendencies in national labour laws in various corners of the globe. With its definitive analysis of such crucial matters as the decentralization of collective bargaining and how individual employment contracts can deviate from collective agreements and statutory law, and its comparison of representative national labour law systems, this highly informative book will prove of inestimable value to all professionals concerned with employment relations, labour disputes, or labour market policy, especially in the context of multinational workforces.

Accounting has often been described as the language of business. As the increasing competition of overseas markets begins to affect even the smallest local companies, many more business professionals must become fluent in accounting principles and practice. Standardization of Financial Reporting and Accounting in Latin American Countries highlights the recent move to International Financial Reporting Standards (IFRS) and addresses some of the concerns raised due to cultural differences and the level of enforcement of these standards in separate countries. Describing the evolution of both financial and managerial accounting due to the adoption of IFRS, this book is an essential reference source for both students and seasoned professionals in the fields of accounting, finance, and related management fields, especially those with an international emphasis.

Building on his pathbreaking, award-winning bestseller, *Relevance Lost*, H. Thomas Johnson presents a devastating critique of the top-down hierarchical accounting systems that have dominated American corporations since the 1950s. In *Relevance Regained*, Johnson shows exactly how "managing by remote control" through results-oriented accounting information has obstructed the real business objective: to reduce process variation and lead times for the purpose of obtaining and keeping satisfied customers. The failure of most American businesses to be competitive and profitable, he contends, is their reliance on management accounting information to control people's actions and productivity. Cost-focused imperatives from on high must be replaced, Johnson asserts, with information systems that link actions with imperatives of global competition. Self-managing work teams, according to Johnson, must own problem-solving information to reduce variation, delays, and excess in processes. Johnson prescribes the necessary changes in management principles that must replace the outdated style associated with the industrial revolution. Responsiveness to customers-not accounting costs-and flexibility-reducing lead times and removing constraints-are necessary for sustained competitive excellence and long-term profitability. Johnson discusses the radical overhauls of companies, such as General Electric's work-outs/"best practices" program and Harley-Davidson's work simplification programs, and shows how these strong commitments to new strategies maximize a company's most important assets: people and time. To be globally competitive, he claims, a company's work must be directed toward selling to customers, not just selling products.
