Focuses on the application of membrane technologies in removing toxic metals\metalloids from water. Particular attention is given to the removal of arsenic, uranium, and fluoride. These compounds are all existing in the earth's crust at levels between two and ten thousands micrograms per kg (parts per million) on average and these compounds can be considered highly toxic to humans, when exposed to them primarily from air, food and water. In order to comply with the new maximum contaminant level, numerous studies have been undertaken to improve established treatments or to develop novel treatment technologies for removing toxic metals from contaminated surface and groundwater. Among the technologies available, applicable for water treatment, membrane technologies have been identified as a promising technology to remove such toxic metals from water. The book describes both pressure driven (tight processes, such as Nanofiltration, Reverse Osmosis, Ultrafiltration, etc) and more advanced membrane processes (such as forward osmosis, membrane distillation, and membrane bio-reactors) employed in the application of interest. Key aspect of this book is to provide information on both the basics of membrane technologies and on the results depending on the type of technology employed.

This is the second and updated version of the Textbook of Allergy for the Clinician. It is a unique book in the field of allergy. The uniqueness lies in the international character of the book with contributors representing both the East and West. This book represents the diversity of issues affecting patients in the specialty of allergy, asthma & immunology. There is some discussion of the basic mechanisms involved and extensive elaboration for the clinicians. This book will appeal to medical students, residents and fellow trainees undergoing training as well as consultants in academic and clinical practice settings. The color plates, especially in the section on Allergy, will help in the interaction between the patient and consultant in identifying the plant or flora which is the causative factor. The differences and similarities between the Eastern and Western approaches in the practice of the specialty are being highlighted for the first time in a book.

The Placebo Effect is the most studied healing phenomenon known to mankind. The author has drawn on hundreds of these studies to provide an essential resource for all practitioners who work on a one to one basis with their clients. It presents a knowledge-based approach to augmenting clients' own healing systems and explains how to maximize the placebo response, 'turn on' an individual's inner healing system, even with challenging patients, and improve health outcomes within current methods of practice.
