Estimators need to understand the consequences of entering into a contract, often defined by complex conditions and documents, as well as to appreciate the technical requirements of the project. Estimating and Tendering for Construction Work, 5th edition, explains the job of the estimator through every stage, from early cost studies to the creation of budgets for successful tenders. This new edition reflects recent developments in the field and covers: new tendering and procurement methods the move from basic estimating to cost-planning and the greater emphasis placed on partnering and collaborative working the New Rules of Measurement (NRM1 and 2), and examines ways in which practicing estimators are implementing the guidance emerging technologies such as BIM (Building Information Modelling) and estimating systems which can interact with 3D design models With the majority of projects procured using design-and-build contracts, this edition explains the contractor's role in setting costs, and design statements, to inform and control the development of a project's design. Clearly-written and illustrated with examples, notes and technical documentation, this book is ideal for students on construction-related courses at HNC/HND and Degree levels. It is also an important source for associated professions and estimators at the outset of their careers.

NHM Year 2 Activity Books: * Have built-in assessment. * Provide a structured development of each separate topic. * Use language at an appropriate reading level. * Place maths in a variety of contexts. * Lead more able children through a range of problem-solving activities.

[New Heinemann Maths Yr1, Addition to 10 Activity Book \(8 Pack\)](#)

This title was first published in 2001. The new edition of Science Foundations provides comprehensive coverage of single- and double-award GCSE science. It is fully revised and updated to match the new GCSE specifications, for teaching from September 2001. It contains all the material required for the foundation and higher tiers, with clear progression and explicit differentiation. 'Higher tier only' material is clearly marked in separate spreads. The language level is carefully controlled, with illustrations and layout specifically designed to make the concepts accessible. There are frequent opportunities for students to confirm their understanding of each key idea as it is introduced, via short questions and summary passages on each spread. The books include guidance for students on how to prepare for and answer their

Learn to code and make awesome games with Scratch! Learn coding concepts and skills and start creating your own games right away! Coding for Kids: Scratch is a complete guide that makes mastering this programming language fun and easy for children (ages 6+). From sprites and code blocks to scripts and scorekeeping, Coding for Kids: Scratch helps you discover everything you need to know to create 10 amazing games that you and your friends can play. Watch your confidence grow with step-by-step instructions and clear directions that keep things simple--even as the games you're making get more challenging. Game on! Coding for Kids: Scratch includes: Coding for kids--Learn Scratch terms and concepts, then use them to build games you can start playing immediately. Create 10 games--Cake Clicker, Dino Hunt, Crystal Keeper, and more--code, play, and share 10 cool games. Master Scratch--Simple directions, full-color screenshots, and projects that get more difficult make mastering Scratch a breeze. Make coding for kids fun and games with Coding for Kids: Scratch.

"When math fact instruction is thoughtful and strategic, it results in more than a student's ability to quickly recall a fact; it cultivates reflective students who have a greater understanding of numbers and a flexibility of thinking that allows them to understand connections between mathematical ideas. It develops the skills and attitudes to tackle the future challenges of mathematics." -Sue O'Connell and John SanGiovanni

In today's math classroom, we want children to do more than just memorize math facts. We want them to understand the math facts they are being asked to memorize. Our goal is automaticity and understanding; without both, our children will never build the foundational skills needed to do more complex math. Both the Common Core State Standards and the NCTM Principles and Standards emphasize the importance of understanding the concepts of multiplication and division. Sue O'Connell and John SanGiovanni provide insights into the teaching of basic math facts, including a multitude of instructional strategies, teacher tips, and classroom activities to help students master their facts while strengthening their understanding of numbers, patterns, and properties. Designed to be easily integrated into your existing math program, *Mastering the Basic Math Facts*: emphasizes the big ideas that provide a focus for math facts instruction broadens your repertoire of instructional strategies provides dozens of easy-to-implement activities to support varied levels of learners stimulates your reflection related to teaching math facts. Through investigations, discussions, visual models, children's literature, and hands-on explorations, students develop an understanding of the concepts of multiplication and division, and through engaging, interactive practice achieve fluency with basic facts. Whether you're introducing your students to basic math facts, reviewing facts, or providing intervention for struggling students, this book will provide you with insights and activities to simplify this complex, but critical, component of math teaching. A teacher-friendly CD filled with customizable activities, templates, recording sheets, and teacher tools (hundred charts, multiplication tables, game templates, and assessment options) simplifies your planning and preparation. Over 450 pages of reproducible forms are included in English and Spanish translation. Study Guide included for Professional Learning Communities and Book Clubs.

[Numbers to 100, Then 1000](#)

Do you have what it takes to be a maths magician? Yes, of course you do - and this action-packed book will prove it! Baffle your friends with mysterious number squares; measure the height of a tree using only shadows; and solve a mathematical spot-the-difference! While you're drawing, making, and playing, you'll be learning all kinds of exciting facts and ideas about the world of STEM- science, technology, engineering, and maths. This book supports the key stage 1 (KS1) and key stage 2 (KS2) curriculum and is great for home learning. An awesome book for both boys and girls, aged 7+.
