International Handbook of Threat Assessment

We revisit Lipset's law, which posits a positive and significant relationship between income and democracy. Using dynamic and heterogeneous panel data estimation techniques, we find a significant and negative relationship between income and democracy: higher/lower incomes per capita hinder/trigger democratization. Decomposing overall income per capita into its resource and non-resource components, we find that the coefficient on the latter is positive and significant while that on the former is significant but negative, indicating that the role of resource income is central to the result.

"This introductory chapter sets forth three foundations for threat assessment and management: the first foundation is the defining of basic concepts, such as threat assessment and threat management; the second foundation outlines the similarities and differences between threat assessment and violence risk assessment; the third foundation is a detailed overview of the research findings, theoretical avenues, measurement instruments, and developments in practice over the past quarter century. The goal of our chapter is to introduce the professional reader to the young scientific field of threat assessment and management, and to clarify and guide the seasoned professional toward greater excellence in his or her work"--

A Guide to Minnesota's Public Transportation Network

In 1871 when the University of Alabama reopened after its destruction by Federal troops, Eugene Allen Smith returned to his alma mater as professor of geology and mineralogy. Until his death in 1927 this gifted man devoted his abundant energy and his stout heart to the welfare of the school and the State. After persuading the Legislature to appoint him State Geologist in 1873, he spent his summers enduring chills, fevers, and verbal abuse as he searched for industrial raw materials that could bring about better lives for destitute Alabamians. Traveling in a mule-drawn wagon, he recorded in his journal detailed observations, botanical and geological discoveries, and mineral analyses. He loaded the wagon with specimens for the University museum he dreamed of creating some day. He inventoried industries that had failed or been destroyed, judging whether they were worth salvaging. Interspersed with this information were pithy comments on people he met, frustrations he dealt with, historical notes, and poetic descriptions of rocks and creeks and mountains, giving a vivid picture of Alabama in transition.What he accomplished, against monumental odds, became the catalyst that transformed Alabama from an aimless and poverty-stricken agricultural state to an industrial giant to be reckoned with. How he accomplished what he did, with very little support and hardly any money, gave this diminutive and very human man a stature of mythic proportions in the history of the University and the State. The story of ¿Little Doc,¿ as told in Eugene Allen Smith¿s Alabama, is drawn from many sources: Smith¿s transcribed field notes, countless numbers¿f letters he received and the carbon copies of his replies, his published reports over a period of fifty years, wills, genealogical records, histories of the State and of the University of Alabama, and contemporary newspapers.

Sincerely welcome to proceedings of the 1st International Conference on Trust and Privacy in Digital Business, Zaragoza, Spain, held from August 30th to September 1st, 2004. This conference was an outgrowth of the two successful TrustBus inter- tional workshops, held in 2002 and 2003 in conjunction with the DEXA conferences in Aix-en-Provence and in Prague. Being the first of a planned series of successful conferences it was our goal that this event would initiate a forum to bring together researchers from academia and commercial developers from industry to discuss the state of the art of technology for establishing trust and privacy in digital business. We thank you all the attendees for coming to Zaragoza to participate and debate the new emerging advances in this area. The conference program consisted of one invited talk and nine regular technical papers sessions. The invited talk and keynote speech was delivered by Ahmed Patel from the Computer Networks and Distributed Systems Research Group, University College Dublin, Ireland on "Developing Secure, Trusted and Auditable Services for E-Business: An Autonomic Computing Approach". A paper covering his talk is also contained in this book. The regular paper sessions covered a broad range of topics, from access control - sues to electronic voting, from trust and protocols to digital rights management. The conference attracted close to 100 submissions of which the program committee - cepted 29 papers for presentation and inclusion in the conference proceedings.

Key sectors of modern economies depend highly on ICT. The information flowing through the resulting technological super-infrastructure as well as the information being processed by the complex computing systems that underpin it becomes crucial because its disruption, disturbance or loss can lead to high financial, material and, sometimes, human loss. As a consequence, the security and dependability of this infrastructure become

critical and its protection a major objective for governments, companies and the research community. CRITIS has been born as an event that aims to bring together researchers and professionals from universities, private companies and public administrations interested or involved in all security-related heterogeneous aspects of critical information infrastructures. This volume contains the proceedings of the 1st International Workshop on Critical Information Infrastructure Security (CRITIS 2006), that was held between August 31 and September 1, 2006 on Samos, Greece, and was hosted by the University of the Aegean, Department of Information and Communication Systems Engineering, Laboratory of Information and Communication Systems Security (Info-Sec-Lab). In response to the CRITIS 2006 call for papers, 57 papers were submitted. Each paper was reviewed by three members of the Program Committee, on the basis of significance, novelty, technical quality and relevance to critical infrastructures. At the end of the reviewing process, only 22 papers were selected for presentation, resulting in an acceptance rate of 38%. Revisions were not checked and the authors bear full responsibility for the content of their papers.

Electronically Active Textiles

Electronically Active Textiles (e-textiles) are a type of textile material that has some form of electronic functionality. This can be achieved by attaching electronics onto the surface of the textile, incorporating electronic components as part of the fabrication of the textile itself, or by integrating electronics into the yarns or fibers that comprises the textile. The addition of electronic components can give textiles a wide range of new functions from lighting or heating to advanced sensing capabilities. As such, e-textiles have provided a platform for developing a range of new novel products in fields, such as healthcare, sports, protection, transport, and communications. The purpose of this volume is to report on the advances in the integration of electronics into textiles, and presents original research in the field of e-textiles as well as a comprehensive review of the evolution of e-Textiles. Topics include the fabrication and illumination of e-textiles and the use of e-textiles for temperature sensing.

Mankind is using a greater variety of metals in greaterquantities than ever before. As a result there is increasing globalconcern over the long-term availability of secure and adequatesupplies of the metals needed by society. Critical metals, whichare those of growing economic importance that might be susceptibleto future scarcity, are a particular worry. For many of thesewe have little information on how they are concentrated in theEarth's crust, how to extract them from their ores, and howto use, recycle and dispose of them effectively and safely. Published with the British Geological Survey, the CriticalMetals Handbook brings together a wealth of knowledge oncritical metals and provides a foundation for improving the futuresecurity and sustainability of critical metal supplies. Written byinternational experts, it provides a unique source of authoritativeinformation on diverse aspects of the critical metals, includinggeology, deposits, processing, applications, recycling,environmental issues and markets. It is aimed at a broadnon-specialist audience, including professionals and academicsworking in the exploration and mining sectors, in mining financeand investment, and in mineral processing and manufacturing.
