In this classroom-tested approach to writing, Brock Dethier teaches readers how to analyze and write twenty-one genres that students are likely to encounter in college and beyond. This practical, student-friendly, task-oriented text confidently guides writers through step-by-step processes, reducing the anxiety commonly associated with writing tasks. In the first section, Dethier efficiently presents each genre, providing models, a description of the genres' purpose, context, and discourse; and suggestions for writing activities or "moves" that writers can use to get words on the page and accomplish their writing tasks. The second section explains these moves, over two hundred of them, in chapters ranging from "Solve Your Process Problems" and "Discover" to "Revise" and "Present." Applicable to any writing task or genre, these moves help students overcome writing blocks and develop a piece of writing from the first glimmers of an idea to its presentation. This approach to managing the complexity and challenge of writing in college strives to be useful, flexible, eclectic, and brief—a valuable resource for students learning to negotiate unfamiliar writing situations.

This book gathers the best papers presented at the conference “The Future of the Global Financial System: Downfall or Harmony”, which took place in Limassol, Cyprus on April 13-14, 2018. Organized by the Institute of Scientific Communications (Volgograd, Russia), the conference chiefly focused on reassessing the role and meaning of the global financial system in the modern global economy in light of the crisis that began in 2008 and can still be observed in many countries, and on developing conceptual and applied recommendations on spurring the development of the global financial system. All works underwent peer-review and conform to strict criteria, including a high level of originality (more than 90%), elements of scientific novelty, contribution to the development of economic science, and broad possibilities for practical application. The target audience of this scientific work includes postgraduates, lecturers at higher educational establishments, and researchers studying the modern global financial system. Based on the authors’ conclusions and results, readers will be equipped to pursue their own scientific research. The topics addressed include (but are not limited to) the following issues, which are interesting for modern economic science and practice: financial globalization, the role of finances in the global economy, perspectives of transition in the financial system from part of the infrastructure to a new vector of development in the global economy in the 21st century, reasons for the crisis of the modern financial system and ways of overcoming it, problems and perspectives regarding the harmonization of the global financial system, and scenarios of development for the global financial system. The content is divided into the following parts: development of financial systems at the micro-, meso- and macro-levels, financial infrastructure of the modern economy, legal issues of development of the modern financial system, and management of the global financial system.

New York Times bestseller "A cogent analysis of the concurrent Trump/Brexit phenomena and a dire warning about what lies ahead a lucid, provocative book." --Kirkus Reviews Those who championed globalization once promised a world of winners, one in which free trade would lift all the world's boats, and extremes of left and right would give way to universally embraced liberal values. The past few years have shattered this fantasy, as those who've paid the price for globalism's gains have turned to populist and nationalist politicians to express fury at the political, media, and corporate elites they blame for their losses. The United States elected an anti-

immigration, protectionist president who promised to "put America first" and turned a cold eye on alliances and treaties. Across Europe, anti-establishment political parties made gains not seen in decades. The United Kingdom voted to leave the European Union. And as Ian Bremmer shows in this eye-opening book, populism is still spreading. Globalism creates plenty of both winners and losers, and those who've missed out want to set things right. They've seen their futures made obsolete. They hear new voices and see new faces all about them. They feel their cultures shift. They don't trust what they read. They've begun to understand the world as a battle for the future that pits "us" vs. "them." Bremmer points to the next wave of global populism, one that hits emerging nations before they have fully emerged. As in Europe and America, citizens want security and prosperity, and they're becoming increasingly frustrated with governments that aren't capable of providing them. To protect themselves, many government will build walls, both digital and physical. For instance * In Brazil and other fast-developing countries, civilians riot when higher expectations for better government aren't being met--the downside of their own success in lifting millions from poverty. * In Mexico, South Africa, Turkey, Indonesia, Egypt and other emerging states, frustration with government is on the rise and political battle lines are being drawn. * In China, where awareness of inequality is on the rise, the state is building a system to use the data that citizens generate to contain future demand for change * In India, the tools now used to provide essential services for people who've never had them can one day be used to tighten the ruling party's grip on power. When human beings feel threatened, we identify the danger and look for allies. We use the enemy, real or imagined, to rally friends to our side. This book is about the ways in which people will define these threats as fights for survival. It's about the walls governments will build to protect insiders from outsiders and the state from its people. And it's about what we can do about it.

A rigorous but practical introduction to the economic, financial, and political principles underlying commodity markets. Commodities have become one of the fastest growing asset classes of the last decade and the object of increasing attention from investors, scholars, and policy makers. Yet existing treatments of the topic are either too theoretical, ignoring practical realities, or largely narrative and nonrigorous. This book bridges the gap, striking a balance between theory and practice. It offers a solid foundation in the economic, financial, and political principles underlying commodities markets. The book, which grows out of courses taught by the author at Columbia and Johns Hopkins, can be used by graduate students in economics, finance, and public policy, or as a conceptual reference for practitioners. After an introduction to basic concepts and a review of the various types of commodities—energy, metals, agricultural products—the book delves into the economic and financial dynamics of commodity markets, with a particular focus on energy. The text covers fundamental demand and supply for resources, the mechanics behind commodity financial markets, and how they motivate investment decisions around both physical and financial portfolio exposure to commodities, and the evolving political and regulatory landscape for commodity markets. Additional special topics include geopolitics, financial regulation, and electricity markets. The book is divided into thematic modules that progress in complexity. Text boxes offer additional, related material, and numerous charts and

graphs provide further insight into important concepts.

It is also the only land battle in which Japanese and American forces fought in Arctic conditions. This book presents selected papers on the factors that serve to influence an individual's capacity in financial decision-making. Initial chapters provide an overview of the cognitive factors affecting financial decisions and suggest a link between limited cognitive capacity and the need for financial education. The book then expands on these cognitive limitations to explore the tendency for overconfidence in decision-making and the interplay between rational and irrational factors. Later contributions show how credit card companies benefit from limitations in consumer financial literacy, how gender and cognition intersect to play an important role in financial decision-making, and how to improve financial capacity through financial literacy and education campaigns, including those addressing developed marketplaces. This comprehensive collection of papers will be of value to all readers who seek to better understand the multi-factorial and complex nature of personal financial management in today's economic climate.

From the authors of the popular and bestselling Godwink series comes a new and inspiring collection of true stories about people whose lives were changed by specific and extraordinary answers to their prayers. Prayer is a universal act that anyone can participate in. Simply stated: prayer is a conversation between you and God, and oftentimes brings incredible and astonishing results. The outcomes are called "answered prayers." Yet, with no alternative word in the English language for answered prayer, readers have begun to fill the void with Godwink, which is now making its way into dictionaries. In *The Godwink Effect*, Squire and Louise, husband and wife, make the case that Godwinks and prayer are inextricably intertwined. The first of seven secrets for more Godwinks is to pray. Moreover, when a Godwink occurs, like a pebble tossed into a pond, there are subsequent ripples that touch the lives of others. Typical of all Godwink books, this volume will be packed with amazing real-life stories about ordinary people, as well as some well-known figures, that reinforce the power of prayer in their lives and the Godwinks that followed.
