The application and interpretation of the four Geneva Conventions of 1949 have developed significantly in the sixty years since the International Committee of the Red Cross (ICRC) first published its Commentaries on these important humanitarian treaties. To promote a better understanding of, and respect for, this body of law, the ICRC commissioned a comprehensive update of its original Commentaries, of which this is the second volume. Its preparation was coordinated by Jean-Marie Henckaerts, ICRC legal adviser and head of the project to update the Commentaries. The Second Convention is a key text of international humanitarian law. It contains the essential rules for the protection of the wounded, sick and shipwrecked at sea, those assigned to their care, and the vessels used for their treatment and evacuation. This article-by-article Commentary takes into account developments in the law and practice to provide up-to-date interpretations of the Convention. The new Commentary has been reviewed by humanitarian-law practitioners and academics from around the world, including naval experts. It is an essential tool for anyone working or studying within this field.

"This report presents new evidence of the Chinese government's mass arbitrary detention, torture, and mistreatment, and the increasingly pervasive controls on daily life. Throughout the region, the Turkic Muslim population of 13 million is subjected to forced political indoctrination, collective punishment, restrictions on movement and communications, heightened religious restrictions, mass surveillance in violation of international human rights law."--Publisher website, viewed September 19, 2018.

Recent world history in a motivating format Glencoe World History: Modern Times draws on the features of Glencoe World History to motivate students, help them understand the connections between recent world events and issues, and give them an appreciation for the interconnectedness of the world's regions and peoples.

In this updated edition, Cathy Vatterott examines the role homework has played in the culture of schooling over the years; how such factors as family life, the media, and "homework gap" issues based on shifting demographics have affected the homework controversy; and what recent research as well as common sense tell us about the effects of homework on student learning. She also examines how the current homework debate has been reshaped by forces including the Common Core, pervasive media and technology presence, the mass hysteria of "achievement culture," and the increasing shift to standards-based and formative assessment. The best way to address the homework controversy is not to eliminate homework. Instead, the author urges educators to replace the current paradigm (characterized by long-standing cultural beliefs, moralistic views, and behaviorist philosophy) with a new paradigm based on the following elements: Designing high-quality homework tasks; Differentiating homework tasks; Deemphasizing grading of homework; Improving homework completion; and Implementing homework support programs. Numerous examples from teacher and school districts illustrate the new paradigm in action, and readers will find useful new tools to start their own journey. The end product is homework that works—for all students, at all levels.

This book provides an introduction and overview to Alfred Adler's person-centered approach to psychotherapy. In Adler's view, all behavior has social meaning, and the socio-cultural context of a person's life is a driving influence on their mental health and life experiences.

The future of disability in America will depend on how well the U.S. prepares for and manages demographic, fiscal, and technological developments that will unfold during the next two to three decades. Building upon two prior studies from the Institute of Medicine (the 1991 Institute of Medicine's report *Disability in America* and the 1997 report *Enabling America*), *The Future of Disability in America* examines both progress and concerns about continuing barriers that limit the independence, productivity, and participation in community life of people with disabilities. This report offers a comprehensive look at a wide range of issues, including the prevalence of disability across a lifespan; disability trends; the role of assistive technology; barriers posed by health care and other facilities with inaccessible buildings, equipment, and information formats; the needs of young people moving from pediatric to adult health care and of adults experiencing premature aging and serious health problems; selected issues in health care financing (e.g., risk adjusting payments to health plans, coverage of assistive technology); and the organizing and financing of disability-related research. *The Future of Disability in America* is an assessment of both principles and scientific evidence for disability policies and services. This book's recommendations propose steps to eliminate barriers and strengthen the evidence base for future public and private actions to reduce the impact of disability on individuals, families, and society.

The best country-by-country assessment of human rights. for journalists, diplomats, and citizens, and is a must-read for anyone interested in the fight to protect human rights in every corner of the globe.

War has always been a dangerous business, bringing injury, wounds, and death, and--until recently--often disease. What has changed over time, most dramatically in the last 150 or so years, is the care these casualties receive and who provides it. This book looks at the history of how the United States has cared for its war casualties and veterans, from ancient times through the aftermath of Vietnam.

Given the wide-ranging implications for global competition, domestic political systems and daily life, US policymakers must prepare for the impacts of new artificial intelligence (AI)-related technologies. Anticipating AI's impacts on the global order requires US policy makers' awareness of certain

aspects of the AI-related technologies--and how those technologies will interact with the rapidly changing global system of human societies. One area that has received little in-depth examination to date is how AI-related technologies could affect countries' domestic political systems--whether authoritarian, liberal democratic, or a hybrid of the two--and how they might impact global competition between different regimes. This work highlights several key areas where AI-related technologies have clear implications for globally integrated strategic planning and requirements.

Freedom in the World, the Freedom House flagship survey whose findings have been published annually since 1972, is the standard-setting comparative assessment of global political rights and liberties. The survey ratings and narrative reports on 193 countries and a group of select territories are used by policy makers, the media, international corporations, and civic activists and human rights defenders to monitor trends in democracy and track improvements and setbacks in freedom worldwide. Press accounts of the survey findings appear in hundreds of influential newspapers in the United States and abroad and form the basis of numerous radio and television reports. The Freedom in the World political rights and civil liberties ratings are determined through a multi-layered process of research and evaluation by a team of regional analysts and eminent scholars. The analysts draw on a broad range of sources of information, including foreign and domestic news reports, academic studies, nongovernmental organizations, think tanks, individual professional contacts, and visits to the region, in conducting their research. The methodology of the survey is derived in large measure from the Universal Declaration of Human Rights, and these standards are applied to all countries and territories, irrespective of geographical location, ethnic or religious composition, or level of economic development.

A new and chilling study of lethal human exploitation in the Soviet forced labor camps, one of the pillars of Stalinist terror In a shocking new study of life and death in Stalin's Gulag, historian Constantinos Alexopoulos suggests that Soviet forced labor camps were driven by brutal exploitation and administered as death camps. The first study to examine the Gulag penal system through the lens of health, medicine, and human exploitation, this extraordinary work draws from previously inaccessible archives to offer a chilling new view of one of the pillars of Stalinist terror.

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and ensure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children: Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that support qualifications and provide professional learning, and the government agencies and other funders that support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children: Birth Through Age 8

the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

A history of the United States in the twentieth century, featuring sociological and cultural events as well as strictly historical, and using many pertinent literary excerpts.

The stories of three of these Vietnamese who survived and eventually found their way to America are told here in stark and moving detail."--BOOK JACKET.

"The Ballot or the Bullet" is the title of a public speech by human rights activist Malcolm X. In this speech, which was delivered on April 3, 1964, at Cory Methodist Church in Cleveland, Ohio, Malcolm X advised African Americans to judiciously exercise their right to vote, but he cautioned that if the government continued to prevent African Americans from attaining full equality, it might be necessary for them to take up arms. It was ranked 7th in the top 100 American speeches of the 20th century by 137 leading scholars of American public address. "It's time for us to submerge our differences and realize that it is best for us to first see that we have the same problem, a common problem - a problem that will make you catch hell whether you're a Baptist, or a Methodist, or a Muslim, or a nationalist. Whether you're educated or illiterate, whether you live on the boulevard or in the alley, you're going to catch hell just like I am." Malcolm X

A masterful and eye-opening examination of Trump and the coercive control tactics he uses to maintain his fanatical devotion in his supporters written by "an authority on breaking away from cults...an expert on the argument that...bears consideration as the next election cycle heats up" (Kirkus Reviews). Since the 2016 election, Donald Trump's behavior has become both more disturbing and yet increasingly familiar. He relies on phrases like, "fake news," "build the wall," and continues to spread the divisiveness and mentality of us-vs.-them. He lies constantly, has no conscience, never admits when he is wrong, and projects all of his shortcomings on to others. He has become more authoritarian, more outrageous, and yet many of his followers remain blindly devoted. Scott Adams, the creator of Dilbert and a vocal Trump supporter, calls him one of the most persuasive people living. His need to squash alternative information and his insistence of constant ego stroking are all characteristics of other famous cult leaders—cult leaders. In *The Cult of Trump*, mind control and licensed mental health expert Steven Hassan draws parallels between our current president and people like Jim Jones, David Koresh, and Sun Myung Moon, arguing that this presidency is in many ways like a destructive cult. He specifically details the ways in which people are influenced through an array of social psychology methods and how they become fiercely loyal and obedient. Hassan was a former "Moonie" himself, and he presents a "thoughtful and well-researched analysis of some of the most puzzling aspects of the current presidency, including the remarkable passivity of fellow Republicans [and] the gross pandering of many members of the press" (Thomas G. Gutheil, MD and professor of psychiatry at Harvard Medical School). *The Cult of Trump* is an accessible and in-depth analysis of the presidency, showing that under the right circumstances, even sane, rational, well-adjusted people can be persuaded to believe the most outrageous ideas. "This book is a must for anyone who wants to understand the current political climate" (Judith Stevens-Long, PhD and author of *Living Well, Dying Well*).

This book gives us a close-up detailing of this gifted, dynamic teacher in a variety of classroom settings, along with analyses of Heathcote's remarkable improvisations with young people.

Billy Frank Jr. was an early participant in the fight for tribal fishing rights during the 1960s. Roughed up, belittled, and handcuffed on the riverbank, he emerged as one of the most influential Northwest Indians in modern history. His efforts helped bring about the 1974 ruling by Federal Judge George H. Boldt affirming Northwest tribal fishing rights and allocating half the harvest catch to them. Today, he continues to support Indian country and people by working to protect salmon and restore the environment. Where the Salmon Run tells the life story of Billy Frank from his father's influential tales, through the difficult and contentious days of the Fish Wars today. Based on extensive interviews with Billy, his family, close advisors, as well as political and former foes, and the holdings of Washington State's cultural institutions, we learn about the legend behind the legend, and the people who helped him along the way.

This book focuses on one of the most visible and important consequences of total defeat in postwar Germany: the return to East and West Germany of the two million German soldiers and POWs who spent an extended period in Soviet captivity. These former prisoners made up a unique segment of German society. They were both soldiers in the war of racial annihilation on the Eastern front and then suffered extensive hardship and deprivation themselves as prisoners of war. The book explores the lingering consequences of the soldiers' return and explores returnees' own responses to a radically changed and divided homeland. Historian Frank Biess traces the origins of the postwar period to the last years of the war, when ordinary Germans began to face the prospect of imminent defeat. He then demonstrates parallel East and West German efforts to overcome the German legacy by transforming returning POWs into ideal post-totalitarian or antifascist citizens. By exploring returnees' troubled adjustment to the more private spheres of the workplace and the family, Biess stresses the limitations of these East and West German attempts to move beyond the war. Drawing on a wide array of primary and secondary sources, Homecomings combines the political history of postwar reconstruction with the social history of returnees and the cultural history of war memories, gender identities. It unearths important structural and functional similarities between German and American postwar societies, which remained infused with the aftereffects of unprecedented violence, loss, and mass death long after the war was over.

A classic of World War II literature, an incredibly revealing work that provides a near comprehensive account of the war and brings to life the legendary general and eventual president of the United States. Five-star General Dwight D. Eisenhower was arguably the single most important military figure of World War II. Crusade in Europe tells the complete story of the war as he planned and executed it. Through Eisenhower's eyes the enormous scope and drama of the war--strategy, moments of great decision--become fully illuminated in all their fateful glory. Penned before his Presidency, this account is deeply human and helped propel him to the highest office. His personal record of the tense first hours after he had issued the order to attack leaves no doubt of his courage and reveals how this great leader handled the ultimate pressure. For historians, his memoir of this world historic period has become an indispensable record of the war and timeless classic.
