Bernard Williams begins his skeptical look at the history of ethical theory with a reminder of where it began, with Socrates' question, "how should one live?" If ethics aims to address the question of "how one should live", then the work of historians may just be our greatest source of what Mill called "experiments in living" or narratives about the different ways in which humans have lived. Williams claimed that distance establishes a relativism that prevents us from looking to the distant past and asking whether that is "how one should live", or whether a particular historical practice constituted "living well." In contrast, R.G. Collingwood claimed that it is not only possible, but necessary, to hold the beliefs of distant agents in order to avoid "scissors and paste" history, or history that makes use of inductive generalization. Surveying seven decades worth of historical writing on the conflict between the US and Japan during World War II, this book explores the ways in which historians use moral statements in their writing, and particularly in their accounts of political leadership. Specifically, it identifies six distinct modes of moral reasoning used in history, and contrasts these modes of reasoning with the Kantian, Utilitarian, and Aristotelian modes of reasoning found in traditional moral philosophy. Finally, drawing on the philosophy of history of both Williams and Collingwood, the book reconciles skepticism with the possibility of using the past to understand how one should live with the historian's need to avoid scissors and paste history.

This is the second volume focused on geoethics published by the Geological Society of London. This is a significant step forward in which authors address the maturation of geoethics. The field of geoethics is now ready to be introduced outside the geoscience community as a logical platform for global ethics that addresses anthropogenic changes. Geoethics has a distinction in the geoscientific community for discussing ethical, social and cultural implications of geoscience knowledge, research, practice, education and communication. This provides a common ground for confronting ideas, experiences and proposals on how geosciences can supply additional service to society in order to improve the way humans interact responsibly with the Earth system. This book provides new messages to geoscientists, social scientists, intellectuals, law- and decision-makers, and laypeople. Motivations

and actions for facing global anthropogenic changes and their intense impacts on the planet need to be governed by an ethical framework capable of merging a solid conceptual structure with pragmatic approaches based on geoscientific knowledge. This philosophy defines geoethics.

Master's Thesis from the year 2010 in the subject Business economics - Business Ethics, Corporate Ethics, grade: 1,0, Aarhus School of Business (Marketing und Statistik), language: English, abstract: Business is essential for the development and well-being of a society. However, business does not exist in a vacuum, but is simultaneously dependent on a number of stakeholders, be it employees, customers, investors, interest groups, or the government. In this sense, an extensive and critical debate about the role and conduct of business, and their associated corporate responsibilities in the community, is taking place among academics and practitioners alike. Thereby, it is essential to consider that the practices of corporations are first and foremost resulting from decisions and behaviors of human beings. Business students in their role as future managers are likely to be faced with critical ethical decisions in their daily work routine. Thus, investigating their moral mindset about aspects of business ethics is of great importance. Therefore, the purpose of this master thesis was first of all to critically reflect the academic literature, and present a theoretical framework that addresses valuable concepts with regard to the good life and the just social coexistence of business and society. In a second step, a comprehensive empirical research was conducted, which studied the attitudes toward aspects of business ethics among 1.271 business students in Denmark, Germany, and the United States, using a self-report online questionnaire. Participants evaluated a wide range of questions regarding the moral dimensions underlying the relation of business and society. They were furthermore asked to specify primary and social corporate responsibilities, to define a well-run company, and to state personal criteria that are relevant for them in a notional job offer situation. Gathered data were analyzed on differences among nationalities, as well as on distinctions within the thr

It covers such sections as historical approaches, normative and behavioural methodologies, quantitative, qualitative and experimental perspectives, grounded theory and case methodologies, and finally a section on the role of the researcher in research projects. Were there groups in Ancient Judaism that cultivated esoteric knowledge and transmitted it secretly? With the discovery and burgeoning study of the Dead Sea Scrolls and particularly of the documents legislating the social structure of the Qumran group, the foremost paradigm for analysis of the group's social structure has become the "sect." This is still dominant, having replaced the monastic paradigm used by some of the earliest scholars of the Scrolls. But after studying what has been written on secret societies more generally, Michael Stone has concluded that many known ancient Jewish groups—the Qumran covenanters, Josephus's and Philo's Essenes, and Philo's Therapeutae—should be viewed as societies at the heart of whose existence were esoteric knowledge and

practice. Guarding and transmitting this esoteric knowledge and practice, Stone argues, provided the dynamic that motivated the social and conceptual structure of these groups. Analyzing them as secret societies, he says, enables us to see previously latent social structural dimensions, and provides many new enriching insights into the groups, including the Dead Sea covenanters. By examining historical and literary sources, Stone uncovers evidence for the existence of other secret groups in ancient Jewish society. This line of study leads Stone not only to consider the "classical" Jewish apocalypses as pseudo-esoteric, but also to discern in them the footsteps of hidden, truly esoteric traditions cultivated in the circles that produced the apocalypses. This discovery has significant implications, especially considering the enormous growth of study of the apocalyptic in the Judaism of the Second Temple period and in nascent Christianity over the last seventy years.

This book is all about teaching the style and conventions of writing for a peer-reviewed scientific journal. From structure to style, titles to tables, abstracts to author lists, this book gives practical advice about the process of writing a paper and getting it published.

The goal of this book is to make it easier for scientists, especially those new to scientific writing, to write about their results and to get their manuscripts accepted in peer-reviewed journals. The book covers each step throughout the submission process, from organizing and outlining the manuscript, presenting statistical data and results, to what happens during the in-house manuscript review process and what to do if an article is initially rejected. In addition to providing practical exercises on these topics, the book focuses on helping writers distil their research into concise take-home messages for readers, in order to convey information as clearly as possible to the target audience.

Since ancient times the search for cures for the great scourges that have afflicted humankind has been an ongoing quest, but it is only within the last 200 years that major breakthroughs have occurred and the development of modern medicine has accelerated. The stories behind these miraculous cures are those of intense rivalries and jealousies, bitter public humiliation, unswerving dedication, subterfuge, and great personal struggles. Often these medical advances have truly changed the world. When Edward Jenner developed the concept of vaccination, and with it the cure for smallpox, he found a way to defeat a disease that had affected half a billion people – more than all those affected by wars and other epidemics combined. And while the Black Death still lingers in pockets around the world, it no longer threatens to destroy entire civilisations as it once did. SMALLPOX, SYPHILIS AND SALVATION uncovers the compelling stories of the men and women, innovations and accidents that have led to diseases from polio to syphilis, diphtheria to diabetes, tetanus to leukaemia no longer being the death sentences they once were. It also sounds a note of warning – for some of these diseases are fighting back. It is estimated that tuberculosis now claims one life every fifteen seconds, while new 'superbugs' are resistant to penicillin and other antibiotics. Diseases may once again threaten to crush the world's population, either in the form of biological warfare or simply because they want to survive as much as we do
