more sustainable society. The 4th Edition is organized in four sections. The first section provides a foundation by familiarizing readers with the current ecological crisis and its historical origins, and by offering a vision for a sustainable future. The next five chapters present psychological research methods, theory, and findings pertinent to understanding, and changing, unsustainable behavior. The third section addresses the reciprocal relationship between planetary and human wellbeing and the final chapter encourages readers to take what they have learned and apply it to move behavior in a sustainable direction. The book concludes with a variety of theoretically and empirically grounded ideas for how to face this challenging task with positivity, wisdom, and enthusiasm. This textbook may be used as a primary or secondary textbook in a wide range of courses on Ecological Psychology, Environmental Science, Sustainability Sciences, Environmental Education, and Social Marketing. It also provides a valuable resource for professional audiences of policymakers, legislators, and those working on sustainable communities.

South Beirut has recently become a vibrant leisure destination with a plethora of caf  s and restaurants that cater to the young, fashionable, and pious. What effects have these establishments had on the moral norms, spatial practices, and urban experiences of this Lebanese community? From the diverse voices of young Shi'i Muslims searching for places to hang out, to the Hezbollah officials who want this media-savvy generation to be more politically involved, to the religious leaders worried that Lebanese youth are losing their moral compasses, *Leisurely Islam* provides a sophisticated and original look at leisure in the Lebanese capital. What makes a caf   morally appropriate? How do people negotiate morality in relation to different places? And under what circumstances might a pious Muslim go to a caf   that serves alcohol? Lara Deeb and Mona Harb highlight tensions and complexities exacerbated by the presence of multiple religious authorities, a fraught sectarian political context, class mobility, and a generation that takes religion for granted but wants to have fun. The authors elucidate the political, economic, religious, and social changes that have taken place since 2000, and examine leisure's influence on Lebanese sociopolitical and urban situations. Asserting that morality and geography cannot be fully understood in isolation from one another, *Leisurely Islam* offers a colorful new understanding of the most powerful community in Lebanon today.

### Psychology for Sustainability

*Privatizing Russia* offers an inside look at one of the most remarkable reforms in recent history. Having started on the back burner of Russian politics in the fall of 1991, mass privatization was completed on July 1, 1994, with two thirds of the Russian industry privately owned, a rapidly rising stock market, and 40 million Russians owning company shares. The authors, all key participants in the reform effort, describe the events and the ideas driving privatization. They argue that successful reformers must recognize privatization as a process of depoliticizing firms in the face of massive opposition: making the firm responsive to market rather than political influences. The authors first review the economic theory of property rights, identifying the political influence on firms as the fundamental failure of property rights under socialism. They detail the process of coalition building and compromise that ultimately shaped privatization. The main elements of the Russian program -- corporatization, voucher use, and voucher auctions -- are described, as is the responsiveness of privatized firms to outside investors. Finally, the market values of privatized assets are assessed for indications of how much progress the country has made toward reforming its economy. In many respects, privatization has been a great success. Market concepts of property ownership and corporate management are shaking up Russian firms at a breathtaking pace, creating powerful economic and political stimuli for continuation of market reforms. At the same time, the authors caution, the political landscape remains treacherous as old-line politicians reluctantly cede their property rights and authority over firms.

This book covers the recent research advancements in the area of charging strategies that can be employed to accommodate the anticipated high deployment of Plug-in Electric Vehicles (PEVs) in smart grids. Recent literature has focused on various potential issues of uncoordinated charging of PEVs and methods of overcoming such challenges. After an introduction to charging coordination paradigms of PEVs, this book will present various ways the coordinated control can be accomplished. These innovative approaches include hierarchical coordinated control, model predictive control, optimal control strategies to minimize load variance, smart PEV load management based on load forecasting, integrating renewable energy sources such as photovoltaic arrays to supplement grid power, using wireless communication networks to coordinate the charging load of a smart grid and using market price of electricity and customers payment to coordinate the charging load. Hence, this book proposes many new strategies proposed recently by the researchers around the world to address the issues related to coordination of charging load of PEVs in a future smart grid.

After outlining current environmental difficulties, the authors demonstrate how 6 major approaches in psychology (social psychological, psychoanalytic, behavioral, physiological, cognitive, and holistic) can be applied to environmental problems. The authors demonstrate why it is critical to address environmental threats now, and offer ideas on how psychological principles can contribute to building a sustainable culture. Personal examples engage the reader and provide suggestions for changing behavior and political structures. Reorganized and updated throughout, the second edition features a new chapter on neuropsychological and health issues and a list of key concepts in each chapter. Cartoons and humorous analogies add a light touch to the book's serious message. Written for psychology and environmental studies students, the book is an excellent teaching tool in courses on environmental, conservation, or ecological issues, found in departments of psychology, sociology, environmental science, and biology. A defining moment in James Law's architectural career occurred in 2000 when he was invited to design of both architecture and technology of the Dickson Cyber Express Shopping Mall — the world's first "Bricks and Clicks" retail complex in Hong Kong. This led to James coining the term "Cybertecture," to symbolize a new kind of design which merges technology and architecture as a future design that brings people "Live The Future." With growing reputation, James became an active advocate in the issues of future technology and design. As a dual design concept, Cybertecture is a broadspectrum design philosophy that can be applied to an infinite number of different types of projects and scenarios. The ultimate goal is to create a better world, where endeavours, processes and events take place in spaces that introduce people to a new level of comprehension and wisdom.

Is nature all there is? John Haught examines this question and in doing so addresses a fundamental issue in the dialogue of science with religion. The belief that nature is all there is and that no overall purpose exists in the universe is known broadly as 'naturalism'. Naturalism, in this context, denies the existence of any realities distinct from the natural world and human culture. Since the rise of science in the modern world has had so much influence on naturalism's intellectual acceptance, the author focuses on 'scientific' naturalism and the way in which its defenders are now attempting to put a distance between contemporary thought and humanity's religious traditions. Haught seeks to provide a reasonable, scientifically informed alternative to naturalism. His approach will provide the basis for lively discussion among students, scholars, scientists, theologians and intellectually curious people in general.

volumes of data. Database performance has become a major headache, and most IT departments believe that developers should provide simple SQL code to solve immediate problems and let DBAs tune any bad SQL later. In *The Art of SQL*, author and SQL expert Stephane Faroult argues that this safe approach only leads to disaster. His insightful book, named after *Art of War* by Sun Tzu, contends that writing quick inefficient code is sweeping the dirt under the rug. SQL code may run for 5 to 10 years, surviving several major releases of the database management system and on several generations of hardware. The code must be fast and sound from the start, and that requires a firm understanding of SQL and relational theory. *The Art of SQL* offers best practices that teach experienced SQL users to focus on strategy rather than specifics. Faroult's approach takes a page from Sun Tzu's classic treatise by viewing database design as a military campaign. You need knowledge, skills, and talent. Talent can't be taught, but every strategist from Sun Tzu to modern-day generals believed that it can be nurtured through the experience of others. They passed on their experience acquired in the field through basic principles that served as guiding stars amid the sound and fury of battle. This is what Faroult does with SQL. Like a successful battle plan, good architectural choices are based on contingencies. What if the volume of this or that table increases unexpectedly? What if, following a merger, the number of users doubles? What if you want to keep several years of data online? Faroult's way of looking at SQL performance may be unconventional and unique, but he's deadly serious about writing good SQL and using SQL well. *The Art of SQL* is not a cookbook, listing problems and giving recipes. The aim is to get you-and your manager-to raise good questions.
