This book presents a wide range of contributions addressing diverse aspects of biodiversity exploitation and conservation. These collectively provide a snapshot of ongoing action and state-of-the-art research, rather than a series of necessarily more superficial overviews. Examples presented here derive from studies in 17 countries including Africa, Asia, Europe, and North and South America. These reports will stimulate future work toward attaining a sustainable balance between the conservation and exploitation of biodiversity.

This open access book was prepared as a Final Publication of the COST Action IC1303 "Algorithms, Architectures and Platforms for Enhanced Living Environments (AAPELE)". The concept of Enhanced Living Environments (ELE) refers to the area of Ambient Assisted Living (AAL) that is more related with Information and Communication Technologies (ICT). Effective ELE solutions require appropriate ICT algorithms, architectures, platforms, and systems, having in view the advance of science and technology in this area and the development of new and innovative solutions that can provide improvements in the quality of life for people in their homes and can reduce the financial burden on the budgets of the healthcare providers. The aim of this book is to

become a state-of-the-art reference, discussing progress made, as well as prompting future directions on theories, practices, standards, and strategies related to the ELE area. The book contains 12 chapters and can serve as a valuable reference for undergraduate students, post-graduate students, educators, faculty members, researchers, engineers, medical doctors, healthcare organizations, insurance companies, and research strategists working in this area.

The book is dedicated to the method and application potential of micro segmented flow. The recent state of development of this powerful technique is presented in 12 chapters by leading researchers from different countries. In the first section, the principles of generation and manipulation of micro-fluidic segments are explained. In the second section, the micro continuous-flow synthesis of different types of nanomaterials is shown as a typical example for the use of advantages of the technique in chemistry. In the third part, the particular importance of the technique in biotechnical applications is presented demonstrating the progress for miniaturized cell-free processes, for molecular biology and DNA-based diagnostics and sequencing as well as for the development of antibiotics and the evaluation of toxic effects in medicine and environment.

In 1920's England, a young woman searches for the truth behind her uncle's mysterious death in a town haunted by a restless ghost... Oxford student Jillian Leigh works day and night to keep up with her studies—so to leave at the beginning of the term is next to impossible. But after her uncle Toby, a renowned ghost hunter, is killed in a fall off a cliff, she must drive to the seaside village of Rothewell to pack up his belongings. Almost immediately, unsettling incidents—a book left in a cold stove, a gate swinging open on its own—escalate into terrifying events that convince Jillian an angry spirit is trying to enter the house. Is it Walking John, the two-hundred-year-old ghost who haunts Blood Moon Bay? And who beside the ghost is roaming the local woods at night? If Toby uncovered something sinister, was his death no accident? The arrival of handsome Scotland Yard inspector Drew Merriken, a former RAF pilot with mysteries of his own, leaves Jillian with more questions than answers—and with the added complication of a powerful, mutual attraction. Even as she suspects someone will do anything to hide the truth, she begins to discover spine-chilling secrets that lie deep within Rothewell...and at the very heart of who she is.

Hidden in the mountains of East Tennessee, an eleven-year old goes about the business of being a boy during the summer of 1970. Within a balance of terror and innocence, he bears silent witness to ghosts of the dead and the cruelties of a teenage killer while local justice plays out in a community carved from legacies of coal mining and religion.

Get the must-have reference on standards and best practices for the

delivery of a construction project. The CSI Practice Guides are a library of comprehensive references specifically and carefully designed for the construction professional. Each book examines important concepts and best practices integral to a particular aspect of the construction process. Laying the foundation for this series, The CSI Project Delivery Practice Guide provides fundamental knowledge for the documentation, administration, and successful delivery of construction projects. It also serves as the pivotal starting point for understanding CSI's core values, as well as a useful study aid for those wishing to obtain the Construction Documents Technologist certificate. This easy-to-follow guide: Is a great introduction to the construction process for the new practitioner. Functions as a ready reference for the experienced construction professional. Packaged with the book is an access code which allows access to a password-protected web site with bonus content, including a PDF of the printed book and samples of CSI format documents, such as UniFormat and SectionFormat/PageFormat. The CSI Project Delivery Practice Guide offers general information all construction professionals need for understanding their roles in the delivery of a construction project. Key principles are presented and discussed in detail to allow the reader to take full advantage of material covered in depth by the more specialized CSI Practice Guides. If you can own only one Practice Guide, this is the one to get.

Due to the emergence of IFRS as the required convention for reporting to stock exchanges in the European Union and other important markets, accountants must gain a strong understanding of these standards. Intermediate Accounting integrates this new information throughout the chapters so they'll learn how to apply the new global accounting standards. Global examples are presented to clearly show how the information is utilised in the field. The use of various currencies is also explored, which is critical for accountants to know in today's global businesses environment.

An Encyclopaedia for the label producer and label user sectors, this reference provides a comprehensive understanding of the latest terms and terminology for all kinds of label and product decoration solutions.

100+ Recipes to Air Fry Your Way to a Healthier Heart Frying, baking, roasting, grilling--there's nothing your air fryer can't do. Although your air fryer is healthier than a deep fryer, not all air fryer recipes are truly healthy--especially for your heart. Linda Larsen grew up loving fried foods, but as an adult she needs to eat food that is healthy and nourishing. Today, the author of the bestselling The Complete Air Fryer Cookbook uses her air fryer to cook meals that are just as delicious as her fried favorites--and good for her heart, too. Linda's air fryer recipes in The Healthy Air Fryer Cookbook combine the ease and simplicity of your favorite appliance with the added

benefit of total-body nutrition. This is the only air fryer cookbook that offers truly healthy, easy, and whole-food recipes, so you can enjoy fried foods while being good to your heart. Simple and delicious, this air fryer cookbook includes: More than 100 truly heart-healthy recipes that are low-salt, low-fat, and full-flavor--including vegan and vegetarian options Complete nutrition information that follows American Heart Association guidelines, so you know exactly what you're eating Handy recipe callouts that show how much salt and fat you're sparing yourself by not deep frying your meal With The Healthy Air Fryer Cookbook you don't have to sacrifice your health to enjoy fried foods.

An indispensable reference for aerospace designers, analysts and students. This fifth revised and enlarged edition of this classic, indispensable, and practical guide provides a condensed collection of commonly used engineering reference data specifically related to aerospace design. New material on air breathing propulsion, systems engineering, and radar cross section has been added to reflect recent data in aircraft design. Features: New material on air breathing propulsion, systems engineering, and radar cross section Most commonly used formulas and data for aerospace design Convenient size and binding Large, easy-to-read tables, charts, and figures Handy reference for everyday use Developed by aerospace professionals AIAA Aerospace Design Engineers Guide is an essential tool for every design engineer and every aspiring aerospace engineering student.

Since John Bosch edited and published the first version of this book in 1995, the world of manufacturing and coordinate measuring machines (CMMs) and coordinate measuring systems (CMSs) has changed considerably. However, the basic physics of the machines has not changed in essence but have become more deeply understood. Completely revised and updat

"The Web Hosting Manager" is a one-stop business guide when starting a new web hosting business or when you need to jumpstart your existing web hosting business. This non-technical book guides the reader from the very beginning of starting a web hosting business to highly sophisticated marketing information that makes this book invaluable for the beginner and the pro.

Men with cancer rendered infertile by surgery, chemotherapy, radiation and hormone therapy that are needed to control or cure their disease are increasingly being offered the chance to preserve their reproductive potential through artificial reproductive technologies. Cryopreservation of sperm and testicular tissue have increasingly helped boys and men preserve their fertility. There is a growing subspecialty within reproductive medicine aimed at fertility preservation in this population. Furthermore, strategies are being developed that may in the future revolutionize the approach to such

patients. Written by international authorities in the field of fertility preservation, this comprehensive book is aimed at clinicians dealing with male cancer patients, in particular, urologists, andrologists, oncologists, pediatricians and nursing staff as well as clinicians in reproductive endocrinology. The text reviews the impact of cancers and their treatment on male fertility, the available fertility preservation strategies and post-treatment management.

A young boy concludes his bedtime ritual pretending to be a yellow boat sailing up to the sun.

Learn about the newest Earth Angel realms in this revised and updated edition of Doreen Virtue's best-selling book *Realms of the Earth Angels* (formerly titled *Earth Angels*). In addition to exploring chapters about Incarnated Angels, Starpeople, Wise Ones, and such, you will identify the newly discovered realms – Cherubs, Atlanteans, Aladdin Genies, Galactic Angels, and more – all of which are described in detail, including their patterns with respect to personality, relationships, physical characteristics, and lifestyle. With *Earth Angel Realms*, you'll find out how to fully enjoy the unique qualities of your particular realm, as well as receive tailor-made guidance focusing on your specific life purpose!

Over the last thirty years, scholars of health care organizations have been searching for concepts and images to illuminate their underlying, and shifting, modes of organizing. Nowhere has this controversy been more intense than in the United Kingdom, given the long succession of top down reorganizations within the National Health Service (NHS) over the last thirty years. This book characterises the nature of key reforms - namely managed networks - introduced in the UK National Health Service during the New Labour period (1997-2010), combining rich empirical case material of such managed networks drawn from different health policy arenas (clinical genetics, cancer networks, sexual health networks, and long term care) with a theoretically informed analysis. The book makes three key contributions. Firstly, it argues that New Labour's reforms included an important network element consistent with underlying network governance ideas, specifying conditions of 'success' for these managed networks and exploring how much progress was empirically evident. Secondly, in order to conceptualise many of the complex health policy arenas studied, the book uses the concept of 'wicked problems': problematic situations with no obvious solutions, whose scope goes beyond any one agency, often with conflicting stakeholder interests, where there are major social and behavioural dimensions to be considered alongside clinical considerations. Thirdly, it makes a contribution to the expanding Foucauldian and governmentality-based literature on health care organizations, by retheorising organizational processes and policy developments which do not fit either professional dominance or NPM models from a governmentality perspective. From the empirical evidence

gathered, the book argues that managed networks (as opposed to alternative governance modes of hierarchy or markets) may well be the most suitable governance mode in those many and expanding policy arenas characterised by 'wicked problems', and should be given more time to develop and reach their potential.

Research into the geological processes operating on Mars relies on interpretation of images and other data returned by unmanned orbiters, probes and landers. Such interpretations are based on our knowledge of processes occurring on Earth. Terrestrial analog studies therefore play an important role in understanding the geological features observed on Mars. This 2007 book presents direct comparisons between locales on Earth and Mars, and contains contributions from leading planetary geologists to demonstrate the parallels and differences between these two neighboring planets. Mars is characterized by a wide range of geological phenomena that also occur on Earth, including tectonic, volcanic, impact cratering, eolian, fluvial, glacial and possibly lacustrine and marine processes. The book provides terrestrial analogs for data sets from Mars Global Surveyor, Mars Odyssey, Mars Exploration Rovers and Mars Express, and will therefore be a key reference for students and researchers of planetary science.

Reproduction of the original: An Etymological Dictionary of the Scottish Language by John Jamieson

Essentials of gynaecology, 2/e for the undergraduate medical students. All the chapters have been updated keeping in view the current diagnosis and management guidelines. Chapters under the section Gynaecological Oncology, in particular, have been thoroughly updated with new information on classification, staging and management of premalignant and malignant conditions. Summary boxes, flow charts, algorithms and diagrams have been modified wherever required. Chapters, Abnormal Uterine Bleeding and Benign Diseases of the Vulva, have been entirely rewritten in accordance with the recent developments. Case scenarios, clinical photographs and self-assessment which includes case-based, long- answer and short-answer questions. Helps postgraduates and young practitioners to practice gynaecology with a thorough understanding of clinical diagnosis, investigations and evidence-based management.

Of all the medical specialities, Obstetrics is the only one which deals with the health and well-being of two individuals: the mother and the fetus. This fascinates the medical student, drawing her or him into the intricacies of the subject. What the student of Obstetrics needs is a book that provides a clear and precise description of pathophysiology, clinical features, diagnosis, and management based on current guidelines. Essentials of Obstetrics provides the student with these, in a simple and user-friendly format. Key Features:· Use of hand-drawn and easily reproducible line diagrams, clinical images, and easy-to-read language

Designed as a textbook for undergraduate students in various engineering disciplines—Mechanical, Civil, Industrial Engineering, Electronics Engineering and Computer Science—and for postgraduate students in Industrial Engineering and Water Resource Management, this comprehensive and well-organized book, now in its Second Edition, shows how complex economic decisions can be made from a number of given alternatives. It provides the managers not only a sound basis but also a clear-cut approach to making decisions. These decisions will ultimately result in minimizing costs and/or maximizing benefits. What is more, the book adequately illustrates the concepts with numerical problems and Indian cases. While retaining all the chapters of the previous edition, the book adds a number of topics to make it more comprehensive and more student friendly. What's New to This Edition

- Discusses different types of costs such as average cost, recurring cost, and life cycle cost.
- Deals with different types of cost estimating models, index numbers and capital allowance.
- Covers the basics of nondeterministic decision making.
- Describes the meaning of cash flows with probability distributions and decision making, and selection of alternatives using simulation.
- Discusses the basic concepts of Accounting.

This book, which is profusely illustrated with worked-out examples and a number of diagrams and tables, should prove extremely useful not only as a text but also as a reference for those offering courses in such areas as Project Management, Production Management, and Financial Management.

Peter Straker lives in a converted lighthouse on the Devon coast with a fine view of the sea, two cats, and no neighbors. That's just the way he likes it. He speaks to no one except in his dreams, where he converses with some of the seventy-eight people he believes he killed nearly a quarter-century earlier -- though he can't quite remember how it happened. But Straker's carefully preserved solitude is about to be invaded by Imogen Doody, a prickly and unapproachable school caretaker with a painful history herself. Against his will -- and hers -- Straker soon finds himself helping Imogen repair the run-down cottage she's inherited. There are forces gathering, however, as the twenty-fifth anniversary of Straker's crime approaches, and they're intent upon disturbing his precarious peace.

Analytical Heat Diffusion Theory is a revised edition of an earlier book by Academician Luikov, which was widely used throughout the Soviet Union and the surrounding socialist countries. This book is divided into 15 chapters that treat heat conduction problems by the classical methods and emphasize the advantages of the transform method, particularly in obtaining short time solutions of many transient problems. This book starts with a discussion on the physical fundamentals, generalized variables, and solution of boundary value problems of heat transfer. Considerable chapters are devoted to the basic classical heat transfer problems and problems in which the body surface temperature is a specified function of time. Other chapters

explore the heat transfer problems under different heat sources, including continuous and pulse-type. The discussion then shifts to the problem of freezing wet ground, two-dimensional temperature field, and heat conduction with variable transfer coefficients. The final chapters deal with the fundamentals of the integral transforms and their application to heat conduction problems. These chapters also look into the application of the theory of analytic functions to the heat conduction theory of mathematical physics. This book is an invaluable source for advanced undergraduate or graduate in analytical heat transfer.

Eric Hobsbawm, who passed away in 2012, was one of the most brilliant and original historians of our age. Through his work, he observed the great twentieth-century confrontation between bourgeois fin de siècle culture and myriad new movements and ideologies, from communism and extreme nationalism to Dadaism to the emergence of information technology. In *Fractured Times*, Hobsbawm, with characteristic verve, unpacks a century of cultural fragmentation. Hobsbawm examines the conditions that both created the flowering of the belle époque and held the seeds of its disintegration: paternalistic capitalism, globalization, and the arrival of a mass consumer society. Passionate but never sentimental, he ranges freely across subjects as diverse as classical music, the fine arts, rock music, and sculpture. He records the passing of the golden age of the "free intellectual" and explores the lives of forgotten greats; analyzes the relationship between art and totalitarianism; and dissects phenomena as diverse as surrealism, art nouveau, the emancipation of women, and the myth of the American cowboy. Written with consummate imagination and skill, *Fractured Times* is the last book from one of our greatest modern-day thinkers.

Find the right algorithm for your image processing application
Exploring the recent achievements that have occurred since the mid-1990s, *Circular and Linear Regression: Fitting Circles and Lines by Least Squares* explains how to use modern algorithms to fit geometric contours (circles and circular arcs) to observed data in image processing and computer vision. The author covers all facets—geometric, statistical, and computational—of the methods. He looks at how the numerical algorithms relate to one another through underlying ideas, compares the strengths and weaknesses of each algorithm, and illustrates how to combine the algorithms to achieve the best performance. After introducing errors-in-variables (EIV) regression analysis and its history, the book summarizes the solution of the linear EIV problem and highlights its main geometric and statistical properties. It next describes the theory of fitting circles by least squares, before focusing on practical geometric and algebraic circle fitting methods. The text then covers the statistical analysis of curve and circle fitting methods. The last chapter presents a sample of "exotic" circle fits, including some mathematically sophisticated procedures that use complex numbers and conformal mappings of the complex plane. Essential for understanding

the advantages and limitations of the practical schemes, this book thoroughly addresses the theoretical aspects of the fitting problem. It also identifies obscure issues that may be relevant in future research.

The impact of CIM (Computer Integrated Manufacturing) on the competitiveness of industry is nowadays well acknowledged. Significant increases in productivity, reduction of production costs and the ability to modify operations quickly are amongst the gains made when applying CIM technologies. The integration of automation islands and the application of information technology throughout manufacturing and engineering environments constitute key tasks for European industry. ESPRIT (European Strategic Programme for Research and Development in Information Technology) is a pre-competitive industry-oriented collaborative research and development programme in information technology. The programme is managed and co-funded by the European Community and is organised in close liaison with industry, national administrations and the research Community. ESPRIT has the following three objectives: - To provide the European information technology industry with the basic technologies to meet the competitive requirements of the 1990s; - To promote European industrial cooperation in information technology; - To pave the way for standards. The CIM part of the ESPRIT programme addresses the application of information technology in industrial environments. CIM-Europe is an information and awareness activity of ESPRIT. Its aim is to consolidate and enhance the effects of ESPRIT CIM by disseminating information on progress and achievements in the programme. It stimulates interaction between project teams in CIM and other areas, encouraging the development and the application of CIM techniques to the benefit of European industry. CIM-Europe's main activities are meetings (Study Groups, Workshops and its Annual Conference) and publications (Notices and Proceedings) .

A fresh examination of the past successes of natural products as medicines and their new future from both conventional and new technologies. High-performance liquid chromatography profiling, combinatorial synthesis, genomics, proteomics, DNA shuffling, bioinformatics, and genetic manipulation all now make it possible to rapidly evaluate the activities of extracts as well as purified components derived from microbes, plants, and marine organisms. The authors apply these methods to new natural product drug discoveries, to microbial diversity, to specific groups of products (Chinese herbal drugs, antitumor drugs from microbes and plants, terpenoids, and arsenic compounds), and to specific sources (the sea, rainforest, and endophytes). These new opportunities show how research and development trends in the pharmaceutical industry can advance to include both synthetic compounds and natural products, and how this paradigm shift can be more productive and efficacious.

In *Manhood*, experienced urologist and sexologist Mels van Driel offers an unprecedented history of the penis—with answers to everything you wanted to know, and even some questions you'd never thought to ask. Investigating the penis and its functions, van Driel's work ranges from impotence to the speed of ejaculation, and from inguinal hernia to infertility. Psychological factors that have an impact on sexual experience, as well as contemporary phenomena, such as cyber sex, are examined along the way with good humor and much insight.

Encouraged by the response to the first edition and to keep pace with recent developments, *Fundamentals of Electrical Drives, Second Edition* incorporates greater details on semi-conductor controlled drives, includes coverage of permanent magnet AC motor drives and switched reluctance motor drives, and highlights new trends in drive technology. Contents were chosen to satisfy the changing needs of the industry and provide the appropriate coverage of modern and conventional drives. With the large number of examples, problems, and solutions provided, *Fundamentals of Electrical Drives, Second Edition* will continue to be a useful reference for practicing engineers and for those preparing for Engineering Service Examinations.

From the Preface This book is the first extended look at a new and multifaceted polymer processing technology that has already been discussed in numerous articles. Called Solid-State Shear Pulverization (S3P), this innovative process produces polymeric powders with unique physical properties not found in the output of conventional size-reduction methods. This technology, which utilizes a pulverizer based on a modified co-rotating twin-screw extruder, has profound implications for both the creation of new polymer blends and recycling of plastic and rubber waste. Unlike [earlier processes] where polymers are melted prior to pulverization, pulverizing mixtures of polymers with the S3P process does not involve melting. By contrast, S3P maintains polymers in the solid state and avoids the additional heat history that occurs during [other processes], which can be detrimental to the physical properties of pulverized materials. The research and development of the S3P technology has grown significantly since 1990 from the development of a new plastics recycling process to a much broader polymer processing method that allows intimate mixing of polymers with very different viscosities, solid-state dispersion of additives, including pigments, and continuous production of powder with unique shapes and larger surface areas. Polymeric powders are of growing importance to plastics processors due to the increase use of plastics in various applications, such as rotational molding, powder coatings, and compounding, which require powder as the feedstock. [I]t has become clear that this process allows for in-situ compatibilization of dissimilar polymers by applying mechanical energy to cause chemical reactions. This aspect of S3P technology that we describe in this book should [be useful in] developing new polymer blends with the use of pre-made compatibilizing agents. In addition, it has been discovered that S3P efficiently mixes polymer blends with

different component viscosities, resulting in the elimination of phase inversion. The S3P process directly produces blends with matrix and dispersed phase morphology like those obtained after phase inversion during a long melt-mixing process. This phenomenon is of practical importance because a long processing time is required by conventional melt-mixing to produce a stable blend morphology. S3P is also advantageous for producing thermoplastic or thermoset powder-coating compounds in a one-step process as opposed to a conventional multi-step operation that involves melt extrusion followed by batch grinding. The major capabilities of this new process can be summarized as follows:

- o Continuous powder production from plastics or rubber feedstocks
- o Blending of immiscible polymers
- o Efficient mixing of polymers with unmatched viscosities
- o Environmentally friendly recycling of multicolored, commingled plastics waste
- o Solid-state dispersion of heat-sensitive additives
- o Engineered plastic/rubber blends

Materials and processes well illustrated. The text is well illustrated with 60 photographs, micrographs, diagrams and others figures. Here is a small sampling of the captions of these figures.

- o Particle-size distribution for virgin LDPE powder made with PT-25 pulverizer
- o Optical photograph of virgin LDPE powder made with PT-25 pulverizer
- o Layout for a three-stage rubber pulverizer
- o Flow chart for powder coating production by conventional process and with new S3P technology
- o SEM image of pulverized virgin PP at 40X (first in series of SEM images of polymer powders)
- o Optical micrograph of melt-crystallized thin films of unpulverized virgin PP under polarized light
- o Log of viscosity vs. log shear rate for virgin HDPE after S3P processing
- o Gel permeation chromatograms (GPC) of polystyrene subjected to S3P processing

Color-photo section One of the several functions of Solid-State Shear Pulverization technology is recycling mixed plastic waste. This section of twenty full-color photographs and micrographs illustrates different processed materials, as well as the machinery and mixed waste used. Here is a small sampling of the photo and micrograph captions.

- o Resultant flake feedstock from granulation
- o S3P-made uniform powder from feedstock
- o Flake feedstock of post-consumer HDPE/PP blend (90/10 ratio)
- o Injection-molded test bar (with translucence) made from S3P powder without pelletization
- o Injection-molded test bar made from S3P powder without pelletization showing uniform color
- o Several test bars subjected to tensile testing showing exceptionally high elongation at break

Useful reference data in tables More than 60 tables provide useful data in convenient form. Here is a small sampling of table captions.

- o Physical properties of virgin PP 8020 GU injection-molded from S3P-made powder (first in series of tables on physical properties of various plastics processed from S3P-made powder)
- o Sieve analysis of powder resulting from S3P of virgin LDPE 509.48 (one of series of tables on sieve analysis of polymer powders)
- o Melt-flow rate before and after S3P processing for virgin PS and two PP samples
- o Key physical properties of injection-molded post-consumer polyolefin blends pulverized by S3P process

The Authors Klementina Khait, M.S. Ch.E., Ph.D., is Research Associate Professor and Director of the Polymer Technology Center in the Department of

Chemical Engineering, Northwestern University. Her industrial experience in polymer science and engineering includes work with Borg-Warner Chemicals and Quantum Chemical Corporation. She received her two advanced degrees, in chemical engineering and polymer chemistry, from the Technological Institute, St. Petersburg, Russia. Dr. Khait holds several patents and has published more than 50 papers in scientific and technical journals. Stephen Carr, Ph.D., is Professor of Materials Science and Engineering and Chemical Engineering at Northwestern University. His industrial work includes work in polymer science and engineering with General Motors Corp. He received a doctorate in polymer science from Case Western Reserve University. He has been on the Northwestern University faculty since 1969. Martin H. Mack is Vice President for R&D with the Berstorff Division of Krauss-Maffei Corporation. He holds an engineering degree from the University of Stuttgart. He has served for more than ten years on the Board of Directors of the Society of Plastics Engineers (SPE).
