[Orientalism](#)

The authors in this book ask us to consider whether the perception of beauty has been defined by our genetics and culture over the years - has it changed? Do certain neural connections define our emotional reactions to beauty? Does beauty follow any rules or laws? Can the aspiration toward beauty be detrimental? Can we divorce ourselves from dictates and sink into a mindful connection with our internal beauty? Can we move from the superficial view of "only skin deep" to an intense appreciation of beauty in all of its variations. The Perception of Beauty will lead to a deeper understanding and contemplation of nature, art, and the world around us.

[A Geography Of Time](#)

Beau Lotto, the world-renowned neuroscientist, entrepreneur, and two-time TED speaker, takes us on a tour of how we perceive the world, and how this leads us to create and innovate. Perception is the foundation of human experience, but few of us understand why we see what we do, much less how. In the startling truths about the brain and its perceptions, Beau Lotto shows that the next big innovation is not a new technology: it is a new way of seeing. In this major book, Lotto draws on over two decades of pioneering research to explain that our brain didn't evolve to see the world accurately. It can't! Visually with entertaining illustrations and optical illusions throughout, and with clear and comprehensive explanations of the science behind how our perception works, Deviate will revolutionize the way you see yourself, others and the world. With this new understanding of how the brain functions, Deviate is not just an illuminating account of the neuroscience of thought, behavior, and creativity: it is a call to action, enlisting readers in their own journey of self-discovery.

[Ontopower](#)

The year "1968" marked the climax of protests that simultaneously captured most industrialized Western countries. The protesters challenged the institution of Western democracies, confronting powerful, established parties and groups with an opposing force and public presence that negated traditional structural authority and criticized the basic assumptions of the post-war order. Exploring the effects the protest movement of 1968 had on the political and symbolic order of the societies they called into question, this volume focuses on the consequences and echoes of 1968 from different perspectives in history, sociology, and linguistics.

[The Power of the Elevation of Consciousness](#)

What really sets the best managers above the rest? It's their power to build a cadre of employees who have great inner work lives—consistently positive strong motivation; and favorable perceptions of the organization, their work, and their colleagues. The worst managers undermine inner work life, often unwittingly. As Teresa Amabile and Steven Kramer explain in *The Progress Principle*, seemingly mundane workday events can make or break employees' inner work lives. But it's forward momentum in meaningful work—progress—that creates the best inner work lives. Through rigorous analysis of nearly 12,000 entries provided by 238 employees in 7 companies, the authors explain how managers can foster progress and enhance inner work life every day. The book shows how to remove obstacles to progress, including meaningless tasks and toxic relationships. It also explains how to activate two forces that enable progress: catalysts—events that directly facilitate project work, such as clear goals and autonomy—and (2) nourishers—interpersonal events that uplift workers, such as encouragement and demonstrations of respect and collegiality. Brimming with honest examples from the companies studied, *The Progress Principle* equips aspiring and seasoned leaders alike with the insights they need to maximize their people's performance.

Mansourou comes out of the gate firing and does not relent in this criticism of religious notions and influence. Rather than refer to religion in general terms in the name of religion, Mansourou attacks religious undertones and what is not often looked at in religious subtext along with modern religious theology: shallow and vacant themes in today's complex society.

[Deviate](#)

"This eloquent book inspires us to create a new reality of what it means to be human on this magnificent planet." —Deepak Chopra When New York Times bestselling author John Perkins was a young Peace Corps volunteer, his life was saved by an Amazonian shaman who taught him to "touch the jaguar"—transform his fears into positive action. He went on to become an "economic hit man" (EHM), convincing developing countries to build huge infrastructure that put them perpetually in debt to the World Bank and other US-controlled institutions. Although he sincerely believed this was the best model for economic development, he came to realize it was really a new form of colonialism. Returning to the Amazon, he saw the destructive impact of his EHM work. But inspired by a previously uncontacted tribe that touched its jaguar by uniting with its enemies to defend its territory against invading oil and mining companies, the first time, Perkins details how his experiences in the Amazon converted him from an EHM to a crusader for transforming our falling Death Economy. He destroys its own resources and nature itself into a flourishing Life Economy that renews itself. He provides a strategy for each of us to change our lives: our territory—the earth—against destructive policies and systems.

[Personal Power Or Your Master Self](#)

In the last decade, research on negative social evaluations, from adverse reputation to extreme stigmatization, has burgeoned both at the individual and organizational level. Thus far, this research has largely focused on major corporate risks. Corporate public relations and business executives intuitively know a negative image deters important relationships—from customers and partners, to applicants, stakeholders, and potential funding. At the same time, business conducted in an age of heightened connection, including digital platforms for criticism and a 24-hour news cycle. Executives know that some degree of disapproval is increasingly unavoidable. Negative social evaluations can also put social actors on the map. In the era of identity politics, many political leaders express controversial views to appeal to specific audiences and gain in popularity. Through network and signaling effects, being controversial can pay off. Thomas J. Roulet offers a framework for understanding not only how individuals and organizations can survive in an age of increasing scrutiny, but how negative social evaluations can surprisingly yield positive results. A growing body of work has begun to show that being “up against the rest” is an active corporate identity, and that firms that face strong public hostility can benefit from internal bonding. Synthesizing this work with his original research, and comparisons to work on misconduct and scandals, Roulet addresses an important gap by providing a broader perspective to link the antecedents and consequences of negative social evaluations. Moreover, he reveals the key role that audiences play in assessing these consequences, whether positive or negative, and the function of media in establishing conditions in which public disapproval can bring positive results. Examples and cases cover Uber and Google, Monsanto, Electronic Arts, and the investment banking industry during the financial crisis.

[Felt Time](#)

A bestselling modern classic—both poignant and funny—about a boy with autism who sets out to solve the murder of a neighbor's dog and discovers truths about himself and the world. Nominated as one of America's best-loved novels by PBS's The Great American Read Christopher John Francis Boone knows all the countries of the world and their capitals and every prime number up to 7,057. He relates well to animals but has no understanding of human emotion and cannot stand to be touched. And he detests the color yellow. This improbable story of Christopher's quest to investigate the suspicious death of a neighbor makes for one of the most captivating, unusual, and widely heralded novels in recent years.

[Timing and Time Perception](#)

Color coded terror alerts, invasion, drone war, rampant surveillance: all manifestations of the type of new power Brian Massumi theorizes in *Ontopower*. An in-depth examination of the War on Terror and the culture of crisis, Massumi identifies the emergence of preemption, which he characterizes as the logic of our time. Security threats, regardless of the existence of credible intelligence, are now felt into reality. Whereas nations once waited for a clear danger to emerge before using force, a threat's felt reality now demands launching a preemptive strike. Power refocuses on what may emerge, as that presents itself to feeling. This affective logic of potential washes back from the war front to become the dominant mode of power on the home front: ontopower—the mode of power embodying the logic of preemption across the full spectrum of force, from the “hard” (military intervention) to the “soft” (surveillance). With *Ontopower*, Massumi provides an original theory of power that explains not only current practices of war but the culture of insecurity permeating our contemporary neoliberal condition.

Explore shamanist practices, lucid dreaming, and out-of-body experiences as the author relates his early perceptions and his studies under nagual shaman Juan Matus.

[Leap of Perception](#)

A groundbreaking popular psychology book that explores the deep connection between our body and our brain. Over decades of study, University of Virginia psychologist Dennis Proffitt has shown that we are each living our own personal version of Gulliver's Travels, where the size and shape of the things we see are scaled to the size of our bodies, and our ability to interact with them. Stairs look less steep as dieters lose weight, baseballs grow bigger the better they look, less daunting if you're standing next to a close friend, and learning happens faster when you can talk with your hands. Written with journalist Drake Perle, *Leap of Perception* marries academic rigor with mainstream accessibility. The research presented and the personalities profiled will show what it means to not only be, but to feel, your unique human body. The positive ramifications of viewing ourselves from this embodied perspective include greater athletic, academic, and professional achievement, more nourishing relationships, and greater personal well-being. The better we can understand what our bodies are—what they want they need, what they must avoid—the better we can live our lives.

[Narrative Economics](#)

Time-to-contact is the visual information that observers use in fundamental tasks such as landing an airplane or hitting a ball. Time-to-contact has been studied in perception and action for many years and although many articles have been published on this topic, a comprehensive overview or assessment of the field has not yet existed. This book fills an important gap and will have appeal to the perception and action community. The book is divided into four sections. Section one covers the foundation of time-to-contact, Section two covers different behavioral approaches to time-to-contact estimation, Section three focuses on time-to-contact as perception and strategy, and Section four covers time-to-contact and action regulation.

An expert explores the riddle of subjective time, from why time speeds up as we grow older to the connection between time and consciousness.

[Time-to-Contact](#)

A rigorous, compelling and balanced examination of the British public school system and the inequalities it entrenches. Private schools are institutions that educate children who are already privileged attend and have these privileges further entrenched, almost certainly for life, through a high-quality, richly-resourced

Online Library The Power Of Time Perception Control The Speed Of Time To Slow Down Aging Live A Long Life And Make Every Second Count

education. The Engines of Privilege contends that in a society that mouths the virtues of equality of opportunity, of fairness and of social cohesion, the nature of this educational apartheid amounts to an act of national self-harm that does all of its serious damage. Intrinsic to any vision of the future of Britain is the nature of our educational system. Yet the quality of conversation on the issue of private education remains surprisingly sterile, patchy and highly subjective. Accessible, evidence-based and inclusive, Engines of Privilege aims to kick-start a long overdue national debate. Clear, vigorous prose is combined with focused analysis to compelling effect, illuminating the painful contrast between the importance of private schools in British society and the near-absence of serious making debate, above all on the left.

[Sensation and Perception](#)

The Power of Perception: Leadership, Emotional Intelligence and the Gender Divide serves as a practical guide to educate women, men and organizations on barriers that keep women from fully contributing in the workplace. These include differences in leadership style and emotional intelligence, gender bias and stereotypes, breadwinner and caregiver responsibilities, and differences in gender culture which show up every day at work and home. The Power of Perception also explores significant changes in global demographic trends and how our youngest generations are impacting the workplace. The Power of Perception illustrates the reasons that we don't see more women leading our global businesses. It has nothing to do with women's skills and competencies and even do with perceptions of women as leaders, as workers, as mothers, and as wives. These perceptions have a significant impact on promotion for many women. Perception is reality—and it's powerful. The Power of Perception provides personal stories of women's journeys, real-world examples, and is based on the author's own research as well as that of many others. Every chapter includes practical, easy-to-apply strategies, summary points, and reflection questions to empower women, men, and organizations to fully leverage talent and diversity.

[The Power of Perception](#)

The highly accessible Sensation and Perception presents a current and accurate account of modern sensation and perception from both a cognitive and neurocognitive perspective. To show students the relevance of the material to their everyday lives and future careers, authors Bennett L. Schwartz and Krantz connect concepts to real-world applications, such as driving cars, playing sports, and evaluating risk in the military. Interactive Sensation Laboratory Exercises (ISLE) provide simulations of experiments and neurological processes to engage readers with the phenomena covered in the text and give them an understanding of key concepts. The Second Edition includes a revamped version of the In Depth feature from the previous edition in new Exploration sections to invite readers to learn more about exciting developments in the field. Additionally, new Ponder Further sections prompt students to practice their critical skills with chapter topics.

[The Data Gaze](#)

Responding to the global shift from the Information Age to the Intuition Age, Penny Peirce, a respected leader in the intuition development movement, offers effective, easy-to-follow guidance to help you develop the power of perception and imagination to live effortlessly and joyfully in this new age. With a holistic view of the world and a greater awareness of personal and collective energy, our level of perception is transforming from something singular—to form—to a greatly expanded awareness that includes intuition, past and present, right and left brain, and heart and body. As our perceptive ability evolves, we learn the principles of how we live, create, and grow in order to be successful in the rapidly transforming reality of the Intuition Age. Written with clarity, insight, and humor, Leap of Perception is a comprehensive guide that shows us how to adapt to an expanding paradigm of perception. You will learn to do the situations you want, resolve conflict in relationships, expand your creativity, reduce exhaustion and anxiety from multitasking, ease fear caused by the transformation process, and develop new skills like telepathy, clairvoyance, applied empathy, rapid healing, and more. Building on her first two books, The Intuitive Way: The Definitive Guide to Increasing your Awareness and Frequency; the Power of Personal Vibration, author Penny Peirce once again translates a powerful and complex concept into an effective life practice that is accessible to everyone.

[Power, Perception and Foreign Policymaking](#)

This edited collection presents the latest cutting-edge research in the philosophy and cognitive science of temporal illusions. Illusion and error have long important points of entry for both philosophical and psychological approaches to understanding the mind. Temporal illusions, specifically, concern a fundamental feature of lived experience, temporality, and its relation to a fundamental feature of the world, time, thus providing invaluable insight into investigations of mind and its relationship with the world. The existence of temporal illusions crucially challenges the naive assumption that we can simply infer the tempo of the world from experience. This anthology gathers eighteen original papers from current leading researchers in this subject, covering four broad and interdisciplinary topics: illusions of temporal passage, illusions of duration, illusions of temporal order and simultaneity, and the relationship between temporal illusions and the cognitive representation of time.

[The Illusions of Time](#)

What altered states of consciousness—the dissolution of feelings of time and self—can tell us about the mystery of consciousness. During extraordinary consciousness—shock, meditative states and sudden mystical revelations, out-of-body experiences, or drug intoxication—our senses of time and self are may even feel time and self dissolving. These experiences have long been ignored by mainstream science, or considered crazy fantasies. Recent research, has located the neural underpinnings of these altered states of mind. In this book, neuropsychologist Marc Wittmann shows how experiences that disturb our everyday understanding of the self can help solve the mystery of consciousness. Wittmann explains that the relationship between consciousness of consciousness of self is close; in extreme circumstances, the experiences of space and self intensify and weaken together. He considers the emergence

Online Library The Power Of Time Perception Control The Speed Of Time To Slow Down Aging Live A Long Life And Make Every Second Count

waking life and dreams; how our sense of time is distorted by extreme situations ranging from terror to mystical enlightenment; the experience of the loss of time and self in such disorders as depression, schizophrenia, and epilepsy. Dostoyevsky reported godly bliss during epileptic seizures; neurologist now investigating the phenomenon of the epileptic aura. Wittmann describes new studies of psychedelics that show how the brain builds consciousness, time, and discusses pilot programs that use hallucinogens to treat severe depression, anxiety, and addiction. If we want to understand our consciousness subjectivity, Wittmann argues, we must not be afraid to break new ground. Studying altered states of consciousness leads us directly to the heart of the self and the foundations of consciousness.

[Future Shock](#)

A significant new way of understanding contemporary capitalism is to understand the intensification and spread of data analytics. This text is about the promises and visions that have led to the expansion of data analytics and data-led forms of social ordering. It is centrally concerned with examining the knowledge associated with data analytics and shows that how these analytics are envisioned is central to the emergence and prominence of data at variance of social life. This text aims to understand the powerful role of the data analytics industry and how this industry facilitates the spread and intensification of processes. As such, *The Data Gaze* is concerned with understanding how data-led, data-driven and data-reliant forms of capitalism pervade organisational everyday life. Using a clear theoretical approach derived from Foucault and critical data studies the text develops the concept of the data gaze and shows how powerful and persuasive it is. It's an essential and subversive guide to data analytics and data capitalism.

[Perceptions](#)

The senses can be powerful triggers for memories of our past, eliciting a range of both positive and negative emotions. The smell or taste of a long food can stimulate a rich emotional response connected to our childhood, or a piece of music transport us back to our adolescence. Sense memories can be felt through the senses - sound, vision, and even touch can also trigger intense and emotional memories of our past. In *The Proust Effect*, we learn about why senses are special, how they work in the brain, how they can enrich our daily life, and even how they can help those suffering from problems involving memory. Memory can be evoked by a smell, a taste, a flavour, a touch, a sound, a melody, a colour or a picture, or by some other involuntary sensory stimulus. An can triggers a vivid, emotional reliving of a forgotten event in the past. Exploring the senses in thought-provoking scientific experiments and artistic projects, this fascinating book offers new insights into memory - drawn from neuroscience, the arts, and professions such as education, elderly care, health care and the culinary profession.

[The Power of Being Divisive](#)

In this engaging and spirited book, eminent social psychologist Robert Levine asks us to explore a dimension of our experience that we take for granted—perception of time. When we travel to a different country, or even a different city in the United States, we assume that a certain amount of cultural adjustment is required, whether it's getting used to new food or negotiating a foreign language, adapting to a different standard of living or another currency. In fact, contributors most to our sense of disorientation is having to adapt to another culture's sense of time. Levine, who has devoted his career to studying time and the pace of life, takes us on an enchanting tour of time through the ages and around the world. As he recounts his unique experiences with humor and deep travel with him to Brazil, where to be three hours late is perfectly acceptable, and to Japan, where he finds a sense of the long-term that is unheard of. We visit communities in the United States and find that population size affects the pace of life—and even the pace of walking. We travel back in time to Greece to examine early clocks and sundials, then move forward through the centuries to the beginnings of "clock time" during the Industrial Revolution. That there are places in the world today where people still live according to "nature time," the rhythm of the sun and the seasons, and "event time," the time of time around happenings (when you want to make a late appointment in Burundi, you say, "I'll see you when the cows come in"). Levine raises some fascinating questions. How do we use our time? Are we being ruled by the clock? What is this doing to our cities? To our relationships? To our own bodies and psyches? Are there decisions we have made without conscious choice? Alternative tempos we might prefer? Perhaps, Levine argues, our goal should be to try to live in a "multitemporal" society, one in which we learn to move back and forth among nature time, event time, and clock time. In other words, each of us must find our own geography of time. If we can do that, we will have achieved temporal prosperity.

[Perfect Timing](#)

Social Perception and Social Reality contests the received wisdom in the field of social psychology that suggests that social perception and judgment are flawed, biased, and powerfully self-fulfilling. Jussim reviews a wealth of real world, survey, and experimental data collected over the last century to show that, in fact, social psychological research consistently demonstrates that biases and self-fulfilling prophecies are generally weak, fragile, and fleeting. Furthermore, research in the social sciences has shown stereotypes to be accurate. Jussim overturns the received wisdom concerning social perception in several ways: he critically reviews studies that are highly cited darlings of the bias conclusion and shows how these studies demonstrate far more accuracy than bias, or replicable in subsequent research. Studies of equal or higher quality, which have been replicated consistently, are shown to demonstrate high accuracy, or both. The book is peppered with discussions suggesting that theoretical and political blinders have led to an odd state of affairs in which the flawed and misinterpreted bias studies receive a great deal of attention, while stronger and more replicable accuracy studies receive relatively little attention. In addition, the author presents both personal and real world examples (such as stock market prices, sporting events, and political elections) that routinely undermine his findings. He hands emphases on error and bias, but are generally indicative of high levels of rationality and accuracy. He fully embraces scientific data, even when that data yields unpopular conclusions or contests prevailing conventions or the received wisdom in psychology, in other social sciences, and in broader society.

[Cracking the Curiosity Code](#)

A NEW EDITION UPDATED IN 2020 • Why is it so hard to say "I made a mistake" — and really believe it? When we make mistakes, cling to outdated attitudes, mistreat other people, we must calm the cognitive dissonance that jars our feelings of self-worth. And so, unconsciously, we create fictions that absolve us of responsibility, restoring our belief that we are smart, moral, and right—a belief that often keeps us on a course that is dumb, immoral, and wrong. Backed by decades of research, *Mistakes Were Made (But Not by Me)* offers a fascinating explanation of self-justification—how it works, the damage it can cause, and how to overcome it. Extensively updated, this third edition has many recent and revealing examples, including the application of dissonance theory to divisive issues such as the Black Lives Matter movement and he said/she said claims. It also features a new chapter that illuminates how cognitive dissonance plays a role in the currently polarized political scene, changing the nation's values and putting democracy itself at risk. "Every page sparkles with sharp insight and observation. Mistakes were made—but not in this book!" —Daniel Gilbert, author of *Stumbling on Happiness* "A revelatory study of how lovers, lawyers, doctors, politicians—and all of us—pull the wool over our own eyes. . . . Reading it, we recognize the behavior of our leaders, our loved ones, and—if we're honest—some of the more perplexing mysteries of human nature begin to seem a little clearer." —Francine Prose, O, *The Oprah Magazine*

[Perception](#)

True Self Perception focuses on transcending the limits of perception, releasing all those preconceived patterns and identifications that prevent you from being the ego and becoming the original persona or true self.

Predicts the pace of environmental change during the next thirty years and the ways in which the individual must face and learn to cope with personal change

[The Progress Principle](#)

This book examines the changing dynamics of power in the international arena since the end of the Cold War. Brown engages in analysis of how the UN and the European Union have responded to the so-called rise of China through an examination of how policymakers' perceptions of China have changed and influenced their policy choices. This study undertakes rigorous analysis of how these perceptions have evolved between 1989 and 2009/2016, offering a comparative perspective on the similarities and differences between the policy discourse and behaviour within these two Western powers. Brown argues 'China's rise' is a contested notion, with varied perceptions of how the implications of China's ascendancy have shaped policy preferences in ways that are inconsistent with concerns over the threat of an impending power-transition. Combining concepts and methods derived from IR and FPA, the book examines linkages between great power politics and policymakers' competing interpretations of key international actors, and their influence upon foreign policies. The objective of the study is to illuminate the different ways in which the US and the EU have responded to the rise of China through a close analysis of the making processes and outcomes across a series of key encounters and events, including the transatlantic debate over the EU's proposal to lift its China embargo (2003-2005). Undertaking qualitative analysis of the development of American and European policymakers' perceptions of China, this book will be of interest to graduates and scholars of post-Cold War international politics, Foreign Policy Analysis, policymaking, US-China relations and EU-China relations

[Psychic Perception](#)

We are obsessed with time. However hard we might try, it is almost impossible to spend even one day without the marker of a clock. But how much do we understand about time, and is it possible to retrain our brains and improve our relationship with it? Drawing on the latest research from the fields of psychology, neuroscience, and biology, and using original research on the way memory shapes our understanding of time, acclaimed writer and broadcaster Claudia Hammond delves into the mysteries of time perception. Along the way, she introduces us to an extraordinary array of colourful characters willing to go to great lengths in the interests of research, such as the French speleologist Michel, who spends two months in an ice cave in complete darkness. Time Warped shows how to manage our time more efficiently, speed time up and slow it down at will, plan for the future with more accuracy, and, ultimately, use the warped nature of time to our own advantage.

[The Power of Perception](#)

Everyone is born curious. So, what happens? Why do some people become less curious than others? For individuals, leaders, and companies to be successful, they must determine the things that hold curiosity hostage. Think of the most innovative companies and you will notice they employ people who do not accept the status quo, they aren't reluctant to change, they evolve with the times, they look for problems to solve, and focus on asking questions. Drawing on decades of research incorporating interviews from some of the top leaders of our time, Hamilton examines the factors that impact curiosity including fear, assumptions, technology, and environment (FATE). Through her ground-breaking research, she has created the Curiosity Code Index (CCI) assessment to determine how these factors impact curiosity and to provide an action plan to transform individuals and organizations to help improve areas impacted by curiosity, including innovation, engagement, creativity, and productivity. "I have no special talents. I am only passionately curious" – Albert Einstein

[Time Warped](#)

Why does time seem to speed up as we grow older? Do you want to learn the secret of how to slow it down? Now you can! With access to in-depth research, you can learn how to extend the good times and fast forward through the bad ones with "The Power of Time Perception."

[Social Perception and Social Reality](#)

Presented here in its original 12-volume series, the Personal Power Books are a set of self-help books designed to be carefully studied to develop personal power. In the Foreword to Volume I, personal power is defined as "The ability of strength possessed by the human individual, by which he does, or may, accomplish desired results in an efficient manner, along the lines of physical, mental, and spiritual effort and endeavor." In other words, these books describe the means of attaining control and power in your own life, whether it be financial, physical, mental, or emotional—certainly a worthy goal for any individual. Volume I includes instructions on learning to find your "Master Self," developing the ego, realizing your potential as a person, and defining yourself as you. American writer WILLIAM WALKER ATKINSON (1862-1932) was editor of the popular magazine New Thought from 1901 to 1905 and editor of the journal Advanced Thought from 1916 to 1919. He authored dozens of New Thought books under numerous pseudonyms, including the name "Yogi," some of which are likely still in print today.

[The Power of Time Perception](#)

More than three decades after its first publication, Edward Said's groundbreaking critique of the West's historical, cultural, and political perceptions of the East has become a modern classic. In this wide-ranging, intellectually vigorous study, Said traces the origins of "orientalism" to the centuries-long period during which Europe dominated the Middle and Near East and, from its position of power, defined "the orient" simply as "other than" the occident. This entrenched view continues to dominate western ideas and, because it does not allow the East to represent itself, prevents true understanding. Essential, and still eye-opening, Orientalism remains one of the most important books written about our divided world.

[Mistakes Were Made \(but Not by Me\) Third Edition](#)

In this invigorating and uplifting self-improvement book, Elevate Your Life with the Power of Positive Perception: What I Now Know For Sure, this badass reservist, military wife, writer, speaker, and mom takes you on the journey of finding freedom, fulfillment and new meaning in the things around you. She shows how positive perception can lead to personal elevation, personal growth and personal bliss. Her light-heartedness and sense of humor shines through as inspiring stories, life lessons and fun exercises throughout the ten chapters of this book. The exercises and stories in this book will help you understand your thoughts. You will learn ways to uplift and enrich your life so that you can successfully reach your goals. This book will encourage, inspire and motivate you to take action towards your next goal, whether it's big or small. As you read this great book, you will understand the need to focus on the things that you and build you up. You will feel empowered to improve your life and circumstances with the power of positive perception. Chapters such as "One Life and "Tomorrow is Not Promised" help you understand that you only have one shot at this incredible thing called "life" and you have to make it fantastic, tasteful, sensational and worth the ride for you. Another chapter, "The Mind is very Powerful," reminds the reader about the power of the mind. It explains how mind is in fact a super power, an originator of dreams, ideas and visions, an incubator and much more. It also explores how your mind can set you free. An outstanding feature of this book is its simplicity and authenticity. The bottom line is that by the time you are done with this book, you will experience the #PowerOfPositive PerceptionEffect or #POPPEffect. You will know how to focus on the things that will serve you. You will take charge of your life and go after your goals and dreams because the time for elevation is NOW. Overwhelmed by electronic gadgets? Buried under an avalanche of e-mails? Juggling too many tasks and responsibilities? Desperately in need of a deep breath and a time-out? For all of us who answer yes to any of these questions, help is on the way. Getting to the heart of our hassled and over-scheduled existence, Christine Louise Hohlbaum cheerfully investigates 101 ways to increase our quality of life and productivity by reevaluating how we perceive and use time. Everyone has their own personal bank account of time, and while we cannot control time itself, we can manage the activities with which we fill the time available to us. The Power of Slow gives readers practical, concise directions to change the relationship they have with time and debunks the myths of speed, and urgency as the only ways to efficiency. Tips include: · When working on a project on your computer, close all the windows, with the exception of you need to do your job. · Learn to say no in a polite and constructive way to favors, invitations, and requests. · Manage your own expectations, as well as others, by clearly stating what is possible in the time frame given. · Declare gadget-free zones (both geographical and temporal) to really enjoy your leisure. · Know when your plate is full. · Make commitments to difficult tasks in five-minute increments and gradually increase the increments. · Save your most favorite, the easiest tasks for last to avoid procrastination. The Power of Slow will help readers identify areas in need of improvement and show them how to be more efficient and less frazzled at work and at home---and live a better, more balanced life.

From Nobel Prize-winning economist and New York Times bestselling author Robert Shiller, a groundbreaking account of how stories help drive economic events—and why financial panics can spread like epidemic viruses. Stories people tell—about financial confidence or panic, housing booms, or Bitcoin—can and powerfully affect economies, but such narratives have traditionally been ignored in economics and finance because they seem anecdotal and unscientific. In this groundbreaking book, Robert Shiller explains why we ignore these stories at our peril—and how we can begin to take them seriously. Using a rich array of examples and data, Shiller argues that studying popular stories that influence individual and collective economic behavior—what he calls “narrative economics”—may vastly improve our ability to predict, prepare for, and lessen the damage of financial crises and other major economic events. The result is nothing less than a new way to think about the economy, economic change, and economics. In a new preface, Shiller reflects on some of the challenges of narrative economics, discusses the connection between disease epidemics and economic epidemics, and suggests why epidemiology may hold lessons for economic contagions.
