All Things Bright and Beautiful Introducing a challenging new variant of sudoku, sure to keep puzzle fans on their toes! And it's here, in this big collection, for the very first time. Instead of having the usual 3x3 boxes, this exciting style features irregular regions of nine neighboring cells; they're called jigsaw elements because they all fit together to create one 9x9 grid. You solve it just like regular sudoku, except for one thing: instead of each row, column, and box containing 1 to 9, now each row, column, shaped area, and diagonal has the numbers. That means there's an additional element to take into account. All the puzzles here are hand-done, with no computer aid, and they're absolutely addictive!

Sea Devils Moral philosophy and poststructuralism have long been considered two antithetical enterprises. Moral philosophy is invested in securing norms, whereas poststructuralism attempts to unclench the grip of norms on our lives. Moreover, poststructuralism is often suspected of undoing the possibility of ethical knowledge by emphasizing the unstable, socially constructed nature of our practices and knowledge. In *Unbecoming Subjects*, Annika Thiem argues that Judith Butler's work makes possible a productive encounter between moral philosophy and poststructuralism, rethinking responsibility and critique as key concepts at the juncture of ethics and politics. Putting into conversation Butler's earlier and most recent work, *Unbecoming Subjects* begins by examining how Butler's critique of the subject as nontransparent to itself, formed thoroughly through relations of power and in subjection to norms and social practices, poses a challenge to ethics and ethical agency. The book argues, in conversation with Butler, Levinas, and Laplanche, that responsibility becomes possible only when we do not know what to do or how to respond, yet find ourselves under a demand to respond, and even more, to respond well to others. Drawing on the work of Butler, Adorno, and Foucault, *Unbecoming Subjects* examines critique as a central practice for moral philosophy. It interrogates the limits of moral and political knowledge and probes methods of social criticism to uncover and oppose injustices.

Black Hat Go Although scientific models and simulations differ in numerous ways, they are similar in so far as they are posing essentially philosophical problems about the nature of representation. This collection is designed to bring together some of the best work on the nature of representation being done by both established senior philosophers of science and younger researchers. Most of the pieces, while appealing to existing traditions of scientific representation, explore new types of questions, such as: how understanding can be developed within computational science; how the format of representations matters for their use, be it for the purpose of research or education; how the concepts of emergence and supervenience can be further analyzed by taking into account computational science; or how the emphasis upon tractability--a particularly important issue in computational science--sheds new light on the philosophical analysis of scientific reasoning.

She is a woman, though she does not know her true womanhood. Deep within herself she is sensual, though her senses have been dulled by this modern world. Hamilton has come to Africa to work under the brilliant Danish scientist Herjellsen, a man who speaks of reaching the stars. But what does the ancient stone axe laying on his lab table have to do with space travel? Soon it becomes clear that Herjellsen's experiment is much larger than Hamilton or Herjellsen or even space travel itself. It is about correcting a mistake made tens of thousands of years ago in human evolution. Thrown back in time, Hamilton must be shown her place in a tribe known simply as "the Men," Stone Age hunters who take what they desire and know their true manhood. Will Hamilton survive in this savage land? Will her lover, Tree, teach her what it truly means to be a woman? Can the spark between them put mankind back on its proper path toward the stars? In *Time Slave*, author John Norman brings the same keen philosophical acuity and passion for storytelling that enrich his classic *Gor* novels. Fans of his work will love the fresh take on his theories and the bold adventure that brings them to life.

Scooby-Doo and the Sunken Ship Almost all organisations today face unprecedented levels of change, complexity and volatility. Navigating the resultant disruption dynamics is one of the most important stewardship challenges facing strategic leaders. Getting it right can pay enormous dividends, but getting it wrong can lead to spectacular failure and the ultimate demise of once admired organisations. To address this threat, strategic leaders need to better understand how to navigate complexity and volatility and how to execute strategy in this rapidly changing environment. This book identifies 12 different strategy execution processes used to realise deliberate and emergent strategies – each illustrated with case studies and essential lessons for strategic leaders. The authors then discuss the effectiveness of these processes in different types of complex environments, showing how, used in isolation, each process can, at times, impede performance, sometimes creating survival risks that materialise today or in the future. The authors show the importance of "ambidexterity" and the need for organisations to balance the pursuit of internal efficiency and external market flexibility, both of which are essential to thriving in complex environments. This book provides essential tools for leaders to rethink and reconfigure their strategy execution practices in light of the significant change surrounding their organisations. The book is based on a 5-year, multistage study comprehensively reviewing cutting-edge research on strategy execution, reviewing seminal texts on strategy execution and, through in-depth case study interviews and cross-sectional surveys, identifying contemporary strategy execution practices of a range of different organisations across industries and sectors.
